Fund Summary Information

Federated Hermes Short Duration Corporate ETF (the "Fund")

RISK/RETURN SUMMARY: INVESTMENT OBJECTIVE

The Fund's investment objective is to seek current income.

RISK/RETURN SUMMARY: FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold and sell the Fund's Shares (Shares).

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.39%
Distribution (12b-1) Fee ¹	0.00%
Other Expenses	0.01%
Total Annual Fund Operating Expenses	0.40%
Fee Waivers and/or Expense Reimbursements ²	(0.10)%
Total Annual Fund Operating Expenses After Fee Waivers and/or Expense Reimbursements	0.30%

1 The Fund has adopted a Distribution (12b-1) Plan pursuant to which the Fund may incur and pay a Distribution (12b-1) Fee of up to a maximum of 0.25%. No such fee is currently incurred and paid by the Fund. The Fund will not incur and pay such a Distribution (12b-1) Fee until such time as approved by the Fund's Board of Trustees ("Trustees").

2 The Adviser and certain of its affiliates have agreed to waive certain amounts of their respective fees and/or reimburse expenses. Total annual fund operating expenses (excluding acquired fund fees and expenses, interest expense, taxes, litigation expenses, extraordinary expenses and proxy-related expenses paid by the Fund, if any) paid by the Fund (after the waivers and/or reimbursements) will not exceed 0.29% (the "Fee Limit") up to but not including the later of (the "Termination Date"): (a) July 1, 2024; or (b) the date of the Fund's next effective Prospectus. These arrangements may only be terminated or the Fee Limit increased prior to the Termination Date with the agreement of the Trustees.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that operating expenses remain the same. The Example does not reflect sales charges (loads) on reinvested dividends. If these sales charges (loads) were included, your costs would be higher. Although your actual costs and returns may be higher or lower, based on these assumptions your costs would be:

1 Year	\$ 41
3 Years	\$128
5 Years	\$224
10 Years	\$505

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 28% of the average value of its portfolio.

RISK/RETURN SUMMARY: INVESTMENTS, RISKS AND PERFORMANCE

What are the Fund's Main Investment Strategies?

The Fund primarily invests in a diversified portfolio of investment-grade, fixed-income securities consisting primarily of corporate debt securities. Corporate debt securities, including notes, bonds, debentures and commercial paper, are fixed income securities usually issued by businesses to finance their operations. The Fund's investment adviser (the "Adviser") seeks to enhance the Fund's performance by allocating relatively more of its portfolio to the security type that the Adviser expects to offer the best balance between current income and risk. Some of the corporate debt securities in which the Fund

invests are considered to be “foreign securities,” which are securities of issuers based outside of the United States. The foreign securities in which the Fund invests will be predominately denominated in U.S. dollars. The Fund may invest up to 10% of its assets in fixed-income securities rated below investment grade. Noninvestment-grade securities may also be referred to as below investment-grade securities (“junk bonds” or high yield securities”). To pursue the Fund’s investment strategy, the Adviser can invest in instruments directly or through investing in other investment companies, including, for example, affiliated funds advised by the Adviser or its affiliates.

The Fund may also invest in U.S. Treasury securities, U.S. government agency securities, (including mortgage-backed securities issued or guaranteed by U.S. government agencies or instrumentalities), mortgage-backed securities (MBS), asset-backed securities and commercial mortgage-backed securities (CMBS).

The Fund may invest in derivative contracts, in particular, futures contracts, option contracts and swap contracts, to implement its investment strategies. For example, the Fund may use derivative contracts to increase or decrease the portfolio’s exposure to the investment(s) underlying the derivative in an attempt to benefit from changes in the value of the underlying investment(s). There can be no assurance that the Fund’s use of derivative contracts will work as intended. Derivative investments made by the Fund are included within the Fund’s 80% policy (as described below) and are calculated at market value. Consistent with the Bloomberg US Corporate 1-5 Year Index, the Fund’s benchmark, the Fund may, from time to time, have larger allocations to certain broad market sectors in attempting to achieve its investment objective.

The Adviser may lengthen or shorten duration from time to time based on its interest rate outlook, but, under normal market conditions, the Fund’s dollar-weighted average effective duration is expected to be within a range of 1.5 to 3.5 years. Duration measures the price sensitivity of a fixed-income security to changes in interest rates.

The Fund will invest its assets so that at least 80% of its net assets (plus any borrowings for investment purposes) are invested in corporate fixed-income investments. The Fund will notify shareholders at least 60 days in advance of any change in its investment policy that would enable the Fund to invest, under normal circumstances, less than 80% of its net assets in corporate fixed-income investments.

What are the Main Risks of Investing in the Fund?

All funds take investment risks. Therefore, it is possible to lose money by investing in the Fund. The primary factors that may reduce the Fund’s returns include:

- **Interest Rate Risk.** Prices of fixed-income securities generally fall when interest rates rise. The longer the duration of a fixed-income security, the more susceptible it is to interest rate risk. Recent and potential future changes in monetary policy made by central banks and/or their governments are likely to affect the level of interest rates.
- **Issuer Credit Risk.** It is possible that interest or principal on securities will not be paid when due. Such non-payment or default may reduce the value of the Fund’s portfolio holdings, its share price and its performance.
- **Counterparty Credit Risk.** Credit risk includes the possibility that a party to a transaction involving the Fund will fail to meet its obligations. This could cause the Fund to lose money or to lose the benefit of the transaction or prevent the Fund from selling or buying other securities to implement its investment strategy.
- **Liquidity Risk.** The fixed-income securities in which the Fund invests may be less readily marketable and may be subject to greater fluctuation in price than other securities. Liquidity risk also refers to the possibility that the Fund may not be able to sell a security or close out a derivative contract when it wants to. If this happens, the Fund could incur losses.
- **Risk of Foreign Investing.** Because the Fund invests in securities issued by foreign companies and national governments, the Fund’s Share price may be more affected by foreign economic and political conditions, taxation policies and accounting and auditing standards than would otherwise be the case.
- **Call Risk.** The Fund’s performance may be adversely affected by the possibility that an issuer of a security held by the Fund may redeem the security prior to maturity at a price below its current market value.
- **Risk Associated with Noninvestment-Grade Securities.** Securities rated below investment grade may be subject to greater interest rate, credit and liquidity risks than investment-grade securities. These securities are considered speculative with respect to the issuer’s ability to pay interest and repay principal.
- **Underlying Fund Risk.** The risk that the Fund’s performance is closely related to the risks associated with the securities and other investments held by underlying funds and that the ability of a Fund to achieve its investment objective will depend upon the ability of underlying funds to achieve their respective investment objectives. The Fund bears Underlying Fund fees and expenses indirectly.
- **ETF Risk.** As an ETF, the Fund is subject to the following risks:
 - **Authorized Participants Concentration Risk.** To the extent that the Fund invests in instruments that trade outside of a collateralized settlement system, it may have a limited number of financial institutions that act as Authorized Participants. To the extent they cannot or are otherwise unwilling to engage in creation and redemption transactions with the Fund and no other Authorized Participant steps in, trading in Shares of the Fund may be significantly diminished, bid-ask spreads may widen, and the market price of Shares may represent a significant discount to net asset value (NAV). Shares may also face delisting from the Exchange.

Premium/Discount Risk. There may be times when the market price of the Fund's Shares is more than the NAV intra-day (i.e., the market price represents a premium to NAV) or less than the NAV intra-day (i.e., the market price represents a discount to NAV) and when bid-ask spreads widen. As a result, shareholders of the Fund may pay more than NAV when purchasing Shares and receive less than NAV when selling Fund Shares. This risk is heightened in times of market volatility and in steep market declines. In addition, a Fund's end-of-day market price may deviate from its NAV to the extent that the Fund invests in foreign securities whose local trading markets close before the U.S. market closes because, although the Fund may value such securities at their local market closing prices for purposes of calculating NAV, the broader market may assign them a different value, including due to after-hours developments in their local markets, which may be reflected in the market price of Shares.

Secondary Market Trading Risk. Investors buying or selling Shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of Shares. Secondary market trading is subject to bid-ask spreads and trading in Fund Shares may be halted by the Exchange because of market conditions or other reasons. If a trading halt occurs, a shareholder may temporarily be unable to purchase or sell Shares of the Fund. In addition, although the Fund's Shares are listed on the Exchange, there can be no assurance that an active trading market for Shares will develop or be maintained, that bid-ask spreads will be narrow, or that the Fund's Shares will continue to be listed.

Cash Transactions Risk. Like other ETFs, the Fund sells and redeems its Shares only in large blocks called Creation Units and only to Authorized Participants. Unlike most other ETFs, however, the Fund expects to effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities. As a result, an investment in the Fund may incur certain costs, including brokerage costs in connection with investing cash received and may recognize capital gains in connection with cash redemptions, unlike an ETF that effects creations and redemptions only in-kind. In addition, costs could be imposed on the Fund which would have the effect of decreasing the Fund's net asset value to the extent the costs are not offset by a transaction fee payable by an Authorized Participant.

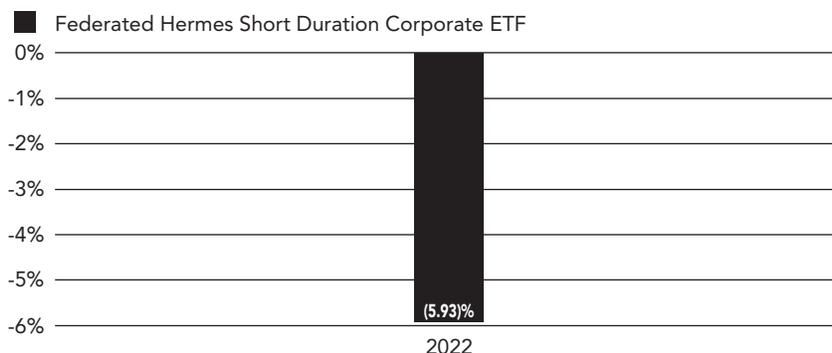

- **Leverage Risk.** Leverage risk is created when an investment exposes the Fund to a level of risk that exceeds the amount invested. Changes in the value of such an investment magnify the Fund's risk of loss and potential for gain.
- **Risk of Investing in Derivative Contracts.** Derivative contracts involve risks different from, or possibly greater than, risks associated with investing directly in securities and other traditional investments. Specific risk issues related to the use of such contracts include valuation and tax issues, increased potential for losses and/or costs to the Fund, and a potential reduction in gains to the Fund. Each of these issues is described in greater detail in this Prospectus. Derivative contracts may also involve other risks described in this Prospectus, such as interest rate, credit, liquidity and leverage risks.
- **Risk Related to the Economy.** The value of the Fund's portfolio may decline in tandem with a drop in the overall value of the markets in which the Fund invests and/or other markets. Economic, political and financial conditions, industry or economic trends and developments or public health risks, such as epidemics or pandemics, may, from time to time, and for varying periods of time, cause the Fund to experience volatility, illiquidity, shareholder redemptions, or other potentially adverse effects.
- **Mortgage-Backed Securities (MBS) Risk.** A rise in interest rates may cause the value of MBS held by the Fund to decline. Certain MBS issued by GSEs are not backed by the full faith and credit of the U.S. government. A non-agency MBS is subject to the risk that the value of such security will decline, because the security is not issued or guaranteed as to principal or interest by the U.S. government or a GSE. The Fund's investments in collateralized mortgage obligations (CMOs) may entail greater market, prepayment and liquidity risks than other MBS. The non-agency MBS and CMOs in which the Fund invests may be less readily marketable and may be subject to greater fluctuation in price than other securities.
- **Prepayment and Extension Risk.** When homeowners prepay their mortgages in response to lower interest rates, the Fund will be required to reinvest the proceeds at the lower interest rates available. Also, when interest rates fall, the price of mortgage-backed securities may not rise to as great an extent as that of other fixed-income securities. When interest rates rise, homeowners are less likely to prepay their mortgages. A decreased rate of prepayments lengthens the expected maturity of a mortgage-backed security, and the price of mortgage-backed securities may decrease more than the price of other fixed-income securities.
- **Sector Risk.** Because the Fund may allocate relatively more assets to certain industry sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund.
- **Technology Risk.** The Adviser uses various technologies in managing the Fund, consistent with its investment objective(s) and strategy described in this Prospectus. For example, proprietary and third-party data and systems are utilized to support decision making for the Fund. Data imprecision, software or other technology malfunctions, programming inaccuracies and similar circumstances may impair the performance of these systems, which may negatively affect Fund performance.

The Shares offered by this Prospectus are not deposits or obligations of any bank, are not endorsed or guaranteed by any bank and are not insured or guaranteed by the U.S. government, the Federal Deposit Insurance Corporation, the Federal Reserve Board or any other government agency.

PERFORMANCE: BAR CHART AND TABLE

Risk/Return Bar Chart

The bar chart and performance table below are intended to help you analyze the Fund’s investment risks in light of its historical returns. The bar chart shows the variability of the Fund’s total returns on a calendar year-by-year basis. The Average Annual Total Return table shows returns averaged over the stated periods, and includes comparative performance information. The Fund’s performance will fluctuate, and past performance (before and after taxes) is not necessarily an indication of future results. Updated performance information for the Fund is available under the “Products” section at FederatedHermes.com/us or by calling 1-800-341-7400.

The Fund’s total return for the three-month period from January 1, 2023 to March 31, 2023, was 1.87%.

Within the periods shown in the bar chart, the Fund’s highest quarterly return was 1.68% (quarter ended December 31, 2022). Its lowest quarterly return was (3.70)% (quarter ended March 31, 2022).

Average Annual Total Return Table

In addition to Return Before Taxes, Return After Taxes is shown to illustrate the effect of federal taxes on Fund returns. *Actual after-tax returns depend on each investor’s personal tax situation, and are likely to differ from those shown.* After-tax returns are calculated using a standard set of assumptions. The stated returns assume the highest historical **federal** income and capital gains tax rates. These after-tax returns do **not** reflect the effect of any applicable **state** and **local** taxes. After-tax returns are not relevant to investors holding Shares through a 401(k) plan, an Individual Retirement Account or other tax-advantaged investment plan.

(For the Period Ended December 31, 2022)

Fund	1 Year	Since Inception
Inception Date:		12/16/2021
Return Before Taxes	(5.93)%	(5.66)%
Return After Taxes on Distributions	(6.59)%	(6.32)%
Return After Taxes on Distributions and Sale of Fund Shares	(3.51)%	(4.58)%
Bloomberg US Corporate 1-5 Year Index¹ (reflects no deduction for fees, expenses or taxes)	(5.62)%	(5.56)%

¹ The Bloomberg US Corporate 1-5 Year Index measures the investment-grade, U.S. dollar-denominated, fixed-rate, taxable corporate and government-related bond markets. The index only includes securities with a maturity between one and ten years. It is composed of the Bloomberg US Corporate Index and a non-corporate component that includes foreign agencies, sovereigns, supnationals and local authorities. The Bloomberg US Corporate 1-5 Year Index is not adjusted to reflect sales charges, expenses or other fees that the Securities and Exchange Commission requires to be reflected in the Fund’s performance. The index is unmanaged and, unlike the Fund, is not affected by cash flows. It is not possible to invest directly in an index.

FUND MANAGEMENT

The Fund’s Investment Adviser is Federated Investment Management Company.

The Fund’s portfolio managers are jointly and primarily responsible for day to day management of the Fund.

John Gentry, CFA, Senior Portfolio Manager, has been the Fund’s portfolio manager since its inception in December of 2021.

Robert Matthews, CFA, Portfolio Manager, has been the Fund’s portfolio manager since its inception in December of 2021.

PURCHASE AND SALE OF FUND SHARES

The Fund is an exchange-traded fund (ETF). Individual Fund Shares may only be purchased and sold on a national securities exchange through a broker-dealer and may not be purchased or redeemed directly with the Fund. The price of Fund Shares is based on market price, and because ETF shares trade at market prices rather than net asset value (NAV), Shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of a Fund (“bid”) and the lowest price a seller is willing to accept for shares (“ask”) when buying or selling shares in the secondary market (the “bid-ask spread”). Recent information, including information about the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund’s website at FederatedHermes.com/us.

TAX INFORMATION

The Fund’s distributions are taxable as ordinary income or capital gains except when your investment is through a 401(k) plan, an Individual Retirement Account or other tax-advantaged investment plan.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and/or its related companies may pay the intermediary for the sale of Fund Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

What are the Fund’s Investment Strategies?

The Fund is an actively managed exchange-traded fund (ETF), and the Shares of the Fund are listed for trading on NYSE Arca. The market price for a Share of the Fund may be different from the Fund’s most recent net asset value (NAV). ETFs are funds that trade like other publicly traded securities. Unlike shares of a mutual fund, which can be bought and redeemed from the issuing fund by all shareholders at a price based on NAV, Shares of the Fund may be purchased or redeemed directly from the Fund at NAV solely by Authorized Participants. Also, unlike shares of a mutual fund, Shares of the Fund are listed on a national securities exchange and trade in the secondary market at market prices that change throughout the day.

The Fund’s investment objective is to seek current income. The investment objective may be changed by the Fund’s Board without shareholder approval. While there is no assurance that the Fund will achieve its investment objective, it endeavors to do so by following the principal strategies and policies described in this Prospectus. The Fund’s Statement of Additional Information (SAI) provides information about the Fund’s non-principal strategies.

The Fund’s investment adviser (the “Adviser”) actively manages the Fund’s portfolio seeking current income in accordance with the Fund’s investment policy parameters for limiting credit risk and Share price volatility attributable to interest rate risk. With respect to the limits on credit risk, the fixed-income securities in which the Fund invests consist primarily of investment-grade, fixed-income securities, consisting primarily of corporate debt securities. Corporate debt securities, including notes, bonds, debentures and commercial paper, are fixed-income securities usually issued by businesses to finance their operations. To pursue the Fund’s investment strategy, the Adviser can invest in instruments directly or through investing in other investment companies, including, for example, affiliated funds advised by the Adviser or its affiliates.

Investment-grade securities are rated in one of the four highest categories BBB or higher by a nationally recognized statistical rating organization (NRSRO), or if unrated, of comparable quality as determined by the Adviser. Consistent with the Bloomberg US Corporate 1-5 Year Index, the Fund’s benchmark, the Fund may, from time to time, have larger allocations to certain broad market sectors in attempting to achieve its investment objective. The Fund may invest up to 10% of its assets in fixed-income securities rated below investment grade. Noninvestment-grade securities may also be referred to as below investment-grade securities. A description of the various types of securities in which the Fund invests, and their risks, immediately follows this strategy section.

The Fund may also invest in U.S. Treasury securities, U.S. government agency securities, (including mortgage-backed securities issued or guaranteed by U.S. government agencies or instrumentalities), mortgage-backed securities (MBS), asset-backed securities and Commercial mortgage-backed securities (CMBS).

The Fund’s Share price volatility attributable to interest rate risk is managed by maintaining, under normal market conditions, a dollar-weighted average portfolio duration of 1.5 to 3.5 years.

Within the 1.5 to 3.5 year portfolio duration range, the Adviser may seek to change the Fund's interest rate volatility exposure, by lengthening or shortening duration from time to time based on its interest rate outlook. If the Adviser expects interest rates to decline, it will generally lengthen the Fund's duration. If the Adviser expects interest rates to increase, it will generally shorten the Fund's duration. The Adviser formulates its interest rate outlook and otherwise attempts to anticipate changes in economic and market conditions by analyzing a variety of factors, such as:

- current and expected U.S. growth;
- current and expected interest rates and inflation;
- the Federal Reserve Board's monetary policy; and
- changes in the supply of or demand for U.S. government securities.

In addition to managing the Fund's portfolio duration, the Adviser may seek to enhance the Fund's total return, of which current income is a component, by selecting securities, within the Fund's credit-quality range, that the Adviser expects will offer the best relative value. In other words, in selecting securities, the Adviser assesses whether the Fund will be adequately compensated for assuming the risks (such as credit risk) of a particular security by comparing the security to other securities without those risks. The Adviser continually analyzes a variety of economic and market indicators in order to arrive at the projected yield "spread" of each security type. (The spread is the difference between the yield of a security versus the yield of a U.S. Treasury security with a comparable average life.) The security's projected spread is weighed against the security's credit risk (in the case of corporate securities) and its risk of prepayment (in the case of mortgage-backed securities) in order to complete the analysis.

Corporate debt securities generally offer higher yields than U.S. government securities to compensate for credit risk. Similarly, asset and mortgage-backed securities generally offer higher yields versus U.S. Treasury securities and non-mortgage-backed agency securities, to compensate for prepayment risk. The Adviser invests the Fund's portfolio seeking the higher relative returns of corporate debt securities and asset and mortgage-backed securities, when available, while maintaining appropriate portfolio diversification and attempting to limit the associated credit or prepayment risks.

The Adviser attempts to manage the Fund's credit risk by selecting corporate debt securities that make default in the payment of principal and interest less likely. The Adviser uses corporate earnings analysis to determine which business sectors and credit ratings are most advantageous for investment by the Fund. In selecting individual corporate fixed-income securities, the Adviser analyzes a company's business, competitive position and financial condition to assess whether the security's credit risk is commensurate with its potential return. Some of the corporate debt securities in which the Fund invests are considered to be "foreign securities," as that term is defined in this Prospectus. Foreign securities are securities of issuers based outside the United States. The Fund considers an issuer to be based outside the United States if it is organized under the laws of, or has its principal office located in another country, the principal trading market for its securities is in another country, or it (directly or through its consolidated subsidiaries) derived in its most current fiscal year at least 50% of its total assets, capitalization, gross revenue or profit from goods produced, services performed or sales made in another country.

The Adviser attempts to manage the Fund's prepayment risk by selecting mortgage-backed securities with characteristics that make prepayment less likely. Characteristics that the Adviser may consider in selecting securities include the average interest rates of the underlying mortgages and the federal agencies (if any) that securitize the mortgages. The Adviser attempts to assess the relative returns and risks for mortgage-backed securities by analyzing how the timing, amount and division of cash flows might change in response to changing economic and market conditions.

There is no assurance that the Adviser's efforts to forecast market interest rates and assess the impact of market interest rates in particular will be successful.

The Fund may use derivative contracts, in particular, futures contracts, option contracts and swap contracts, to implement elements of its investment strategy. For example, the Fund may use derivative contracts to increase or decrease the portfolio's exposure to the investment(s) underlying the derivative in an attempt to benefit from changes in the value of the underlying investment(s). Additionally, by way of example, the Fund may use derivative contracts in an attempt to:

- increase or decrease the effective duration of the Fund portfolio;
- obtain premiums from the sale of derivative contracts;
- realize gains from trading a derivative contract; or
- hedge against potential losses.

There can be no assurance that the Fund's use of derivative contracts will work as intended. Derivative investments made by the Fund are included within the Fund's 80% policy (as described below) and are calculated at market value.

Although the Fund may invest in securities of any maturity and the value of the Fund's Shares will fluctuate, the Adviser will seek to manage the magnitude of fluctuation by limiting, under normal market conditions, the Fund's dollar-weighted average duration of 1.5 to 3.5 years. Duration measures the price sensitivity of a fixed-income security to changes in interest rates.

The Fund will invest its assets so that at least 80% of its net assets (plus any borrowings for investment purposes) are invested in corporate fixed-income investments. The Fund will notify shareholders at least 60 days in advance of any change in its investment policy that would enable the Fund to invest, under normal circumstances, less than 80% of its net assets in corporate fixed-income investments.

TEMPORARY INVESTMENTS

The Fund may temporarily depart from its principal investment strategies by investing its assets in shorter-term debt securities and similar obligations or holding cash. It may do this in response to unusual circumstances, such as: adverse market, economic or other conditions (for example, to help avoid potential losses, or during periods when there is a shortage of appropriate securities); to maintain liquidity to meet shareholder redemptions; or to accommodate cash inflows. It is possible that such investments could affect the Fund's investment returns and/or the ability to achieve the Fund's investment objectives.

What are the Fund's Principal Investments?

The following provides general information on the Fund's principal investments. The Fund's Statement of Additional Information (SAI) provides information about the Fund's non-principal investments and may provide additional information about the Fund's principal investments.

FIXED-INCOME SECURITIES

Fixed-income securities pay interest, dividends or distributions at a specified rate. The rate may be a fixed percentage of the principal or may be adjusted periodically. In addition, the issuer of a fixed-income security must repay the principal amount of the security, normally within a specified time. Fixed-income securities provide more regular income than equity securities. However, the returns on fixed-income securities are limited and normally do not increase with the issuer's earnings. This limits the potential appreciation of fixed-income securities as compared to equity securities.

A security's yield measures the annual income earned on a security as a percentage of its price. A security's yield will increase or decrease depending upon whether it costs less (a "discount") or more (a "premium") than the principal amount. If the issuer may redeem the security before its scheduled maturity, the price and yield on a discount or premium security may change based upon the probability of an early redemption. Securities with higher risks generally have higher yields.

The following describes the fixed-income securities in which the Fund principally invests:

Corporate Debt Securities (A Type of Fixed-Income Security)

Corporate debt securities are fixed-income securities issued by businesses. Notes, bonds, debentures and commercial paper are the most prevalent types of corporate debt securities. The Fund may also purchase interests in bank loans to companies. The credit risks of corporate debt securities vary widely among issuers.

In addition, the credit risk of an issuer's debt security may vary based on its priority for repayment. For example, higher ranking ("senior") debt securities have a higher priority than lower ranking ("subordinated") securities. This means that the issuer might not make payments on subordinated securities while continuing to make payments on senior securities. In addition, in the event of bankruptcy, holders of senior securities may receive amounts otherwise payable to the holders of subordinated securities. Some subordinated securities, such as trust-preferred and capital-securities notes, also permit the issuer to defer payments under certain circumstances. For example, insurance companies issue securities known as surplus notes that permit the insurance company to defer any payment that would reduce its capital below regulatory requirements.

Treasury Securities (A Type of Fixed-Income Security)

Treasury securities are direct obligations of the federal government of the United States. Treasury securities are generally regarded as having minimal credit risks.

Government Securities (A Type of Fixed-Income Security)

Government securities are issued or guaranteed by a federal agency or instrumentality acting under federal authority. Some government securities, including those issued by Government National Mortgage Association ("Ginnie Mae"), are supported by the full faith and credit of the United States and are guaranteed only as to the timely payment of interest and principal.

Other government securities receive support through federal subsidies, loans or other benefits, but are not backed by the full faith and credit of the United States. For example, the U.S. Treasury is authorized to purchase specified amounts of securities issued by (or otherwise make funds available to) the Federal Home Loan Bank System, Federal Home Loan Mortgage Corporation ("Freddie Mac") and Federal National Mortgage Association ("Fannie Mae") in support of such obligations.

Some government agency securities have no explicit financial support and are supported only by the credit of the applicable agency, instrumentality or corporation. The U.S. government has provided financial support to Freddie Mac and Fannie Mae, but there is no assurance that it will support these or other agencies in the future.

The Fund treats mortgage-backed securities guaranteed by a federal agency or instrumentality as government securities. Although such a guarantee protects against credit risk, it does not eliminate it entirely or reduce other risks.

Asset-Backed Securities (A Type of Fixed-Income Security)

Asset-backed securities are payable from pools of obligations other than mortgages. Most asset-backed securities involve consumer or commercial debts with maturities of less than 10 years. However, almost any type of fixed-income assets (including other fixed-income securities) may be used to create an asset-backed security. Asset-backed securities may take the form of commercial paper, notes or pass-through certificates. Asset-backed securities have prepayment risks. Like CMOs, asset-backed securities may be structured like Floaters, Inverse Floaters, IOs and POs.

Mortgage-Backed Securities (A Type of Fixed-Income Security)

A mortgage-backed security (MBS) is a type of pass-through security, which is a pooled debt obligation repackaged as interests that pass principal and interest through an intermediary to investors. In the case of MBS, the ownership interests are issued by a trust and represent participation interests in pools of adjustable and fixed-rate mortgage loans. MBS are most commonly issued or guaranteed by the U.S. government (or one of its agencies or instrumentalities). Unlike conventional debt obligations, MBS provide monthly payments derived from the monthly interest and principal payments (including any prepayments) made by the individual borrowers on the pooled mortgage loans. Most MBS make these payments monthly; however, certain MBS are backed by mortgage loans which do not generate monthly payments but rather generate payments less frequently.

The MBS acquired by the Fund could be secured by fixed-rate mortgages, adjustable rate mortgages or hybrid adjustable rate mortgages. Adjustable rate mortgages are mortgages whose interest rates are periodically reset when market rates change. A hybrid adjustable rate mortgage (“hybrid ARM”) is a type of mortgage in which the interest rate is fixed for a specified period and then resets periodically, or floats, for the remaining mortgage term. Hybrid ARMs are usually referred to by their fixed and floating periods. For example, a “5/1 ARM” refers to a mortgage with a five-year, fixed-interest rate period, followed by 25 annual interest rate adjustment periods.

Investments in MBS expose the Fund to interest rate, prepayment and credit risks.

Government Mortgage-Backed Securities (MBS) (A Type of Fixed-Income Security)

A government MBS is a type of pass-through security, which is a pooled debt obligation repackaged as interests that pass principal and interest through an intermediary to investors. In the case of government MBS, the ownership interest is issued by a trust and represents participation interests in pools of adjustable and fixed-rate mortgage loans. Government MBS are issued or guaranteed by the U.S. government (or one of its agencies or instrumentalities). Unlike conventional debt obligations, MBS provide monthly payments derived from the monthly interest and principal payments (including any prepayments) made by the individual borrowers on the pooled mortgage loans. Most government MBS make these payments monthly; however, certain MBS are backed by mortgage loans which do not generate monthly payments but rather generate payments less frequently.

Investments in government MBS expose the Fund to interest rate, prepayment and credit risks.

Foreign Securities

Foreign securities are securities of issuers based outside the United States. To the extent a Fund invests in securities included in its applicable broad-based securities market index, the Fund may consider an issuer to be based outside the United States if the applicable index classifies the issuer as based outside the United States. Accordingly, the Fund may consider an issuer to be based outside the United States if the issuer satisfies at least one, but not necessarily all, of the following:

- it is organized under the laws of, or has its principal office located in, another country;
- the principal trading market for its securities is in another country;
- it (directly or through its consolidated subsidiaries) derived in its most current fiscal year at least 50% of its total assets, capitalization, gross revenue or profit from goods produced, services performed or sales made in another country; or
- it is classified by an applicable index as based outside the United States.

The foreign securities in which the Fund invests will be predominately denominated in the U.S. dollar. Along with the risks normally associated with domestic securities of the same type, foreign securities are subject to currency risks and risks of foreign investing.

Lower-Rated, Fixed-Income Securities

Lower-rated, fixed-income securities are securities rated below investment grade (i.e., BB or lower) by a nationally recognized statistical rating organization (NRSRO). There is no minimal acceptable rating for a security to be purchased or held by the Fund and the Fund may purchase or hold unrated securities and securities whose issuers are in default.

DERIVATIVE CONTRACTS

Derivative contracts are financial instruments that derive their value from underlying securities, commodities, currencies, indices, or other assets or instruments, including other derivative contracts (each a “Reference Instrument” and collectively, “Reference Instruments”). The most common types of derivative contracts are swaps, futures and options, and major asset classes include interest rates, equities, commodities and foreign exchange. Each party to a derivative contract may sometimes be referred to as a “counterparty.” Some derivative contracts require payments relating to an actual, future trade involving the Reference Instrument. These types of derivatives are frequently referred to as “physically settled” derivatives. Other derivative contracts require payments relating to the income or returns from, or changes in the market value of, a Reference Instrument. These types of derivatives are known as “cash-settled” derivatives since they require cash payments in lieu of delivery of the Reference Instrument.

Many derivative contracts are traded on exchanges. In these circumstances, the relevant exchange sets all the terms of the contract except for the price. Parties to an exchange-traded derivative contract make payments through the exchange. Most exchanges require traders to maintain margin accounts through their brokers to cover their potential obligations to the exchange. Parties to the contract make (or collect) daily payments to the margin accounts to reflect losses (or gains) in the value of their contracts. This protects traders against a potential default by their counterparty. Trading contracts on an exchange also allows traders to hedge or mitigate certain risks or carry out more complex trading strategies by entering into offsetting contracts.

The Fund may also trade derivative contracts over-the-counter (OTC), meaning off-exchange, in transactions negotiated directly between the Fund and an eligible counterparty, which may be a financial institution. OTC contracts do not necessarily have standard terms, so they may be less liquid and more difficult to close out than exchange-traded derivative contracts. In addition, OTC contracts with more specialized terms may be more difficult to value than exchange-traded contracts, especially in times of financial stress.

The market for swaps and other OTC derivatives was largely unregulated prior to the enactment of federal legislation known as the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”). Regulations enacted by the Commodity Futures Trading Commission (the “CFTC”) under the Dodd-Frank Act require the Fund to clear certain types of swap contracts (including certain interest rate and credit default swaps) through a central clearinghouse known as a derivatives clearing organization (DCO).

To clear a swap through a DCO, the Fund will submit the contract to, and post margin with, a futures commission merchant (FCM) that is a clearinghouse member. The Fund may enter into the swap with a counterparty other than the FCM and arrange for the contract to be transferred to the FCM for clearing or enter into the contract with the FCM itself. If the Fund must centrally clear a transaction, the CFTC’s regulations also generally require that the swap be executed on a registered exchange (either a designated contract market (DCM) or swap execution facility (SEF)). Central clearing is presently required only for certain swaps; the CFTC is expected to impose a mandatory central clearing requirement for additional derivative instruments over time.

DCOs, DCMs, SEFs and FCMs are all subject to regulatory oversight by the CFTC. In addition, certain derivative market participants that act as market makers and engage in a significant amount of “dealing” activity are also required to register as swap dealers with the CFTC. Among other things, swap dealers are subject to minimum capital requirements and business conduct standards, and must also post and collect initial and variation margin on uncleared swaps with certain of their counterparties. Because of this, if the Fund enters into uncleared swaps with any swap dealers, it may be subject to initial and variation margin requirements that could impact the Fund’s ability to enter into swaps in the OTC market, including making transacting in uncleared swaps significantly more expensive.

At this point in time, most of the Dodd-Frank Act has been fully implemented, though a small number of remaining rulemakings are unfinished or are subject to phase-in periods. Any future regulatory or legislative activity would not necessarily have a direct, immediate effect upon the Fund, though it is within the realm of possibility that, upon implementation of these measures or any future measures, they could potentially limit or completely restrict the ability of the Fund to use these instruments as a part of its investment strategy, increase the costs of using these instruments or make them less effective.

Depending on how the Fund uses derivative contracts and the relationships between the market value of a derivative contract and the Reference Instrument, derivative contracts may increase or decrease the Fund's exposure to the risks of the Reference Instrument and may also expose the Fund to liquidity and leverage risks. OTC contracts also expose the Fund to credit risks in the event that a counterparty defaults on the contract, although this risk may be mitigated by submitting the contract for clearing through a DCO, or certain other factors, such as collecting margin from the counterparty.

As discussed above, a counterparty's exposure under a derivative contract may in some cases be required to be secured with initial and/or variation margin (a form of "collateral").

The Fund may invest in a derivative contract if it is permitted to own, invest in, or otherwise have economic exposure to the Reference Instrument. The Fund is not required to own a Reference Instrument in order to buy or sell a derivative contract relating to that Reference Instrument. The Fund may trade in the following specific types and/or combinations of derivative contracts:

Futures Contracts (A Type of Derivative)

Futures contracts provide for the future sale by one party and purchase by another party of a specified amount of a Reference Instrument at a specified price, date and time. Entering into a contract to buy a Reference Instrument is commonly referred to as buying a contract or holding a long position in the asset. Entering into a contract to sell a Reference Instrument is commonly referred to as selling a contract or holding a short position in the Reference Instrument. Futures contracts are considered to be commodity contracts. The Adviser has claimed an exclusion from the definition of the term "commodity pool operator" under the Commodity Exchange Act with respect to the Fund, and therefore is not subject to registration or regulation as a commodity pool operator under the Act with respect to the Fund. Futures contracts traded OTC are frequently referred to as forward contracts. The Fund can buy or sell financial futures (such as interest rate futures, index futures and security futures), as well as currency futures and currency forward contracts.

Option Contracts (A Type of Derivative)

Option contracts (also called "options") are rights to buy or sell a Reference Instrument for a specified price (the "exercise price") during, or at the end of, a specified period. The seller (or "writer") of the option receives a payment, or premium, from the buyer, which the writer keeps regardless of whether the buyer uses (or exercises) the option. A call option gives the holder (buyer) the right to buy the Reference Instrument from the seller (writer) of the option. A put option gives the holder the right to sell the Reference Instrument to the writer of the option. Options may be bought or sold on a wide variety of Reference Instruments. Options that are written on futures contracts will be subject to margin requirements similar to those applied to futures contracts.

Swap Contracts (A Type of Derivative)

A swap contract (also known as a "swap") is a type of derivative contract in which two parties agree to pay each other (swap) the returns derived from Reference Instruments. Swaps do not always involve the delivery of the Reference Instruments by either party, and the parties might not own the Reference Instruments underlying the swap. The payments are usually made on a net basis so that, on any given day, the Fund would receive (or pay) only the amount by which its payment under the contract is less than (or exceeds) the amount of the other party's payment. Swap agreements are sophisticated instruments that can take many different forms and are known by a variety of names. Common types of swaps in which the Fund may invest include interest rate swaps, caps and floors, total return swaps, credit default swaps and currency swaps.

OTHER INVESTMENTS, TRANSACTIONS, TECHNIQUES

Derivatives Regulation and Asset Coverage

The regulation of the U.S. and non-U.S. derivatives markets has undergone substantial change in recent years and such change may continue. In addition, effective August 19, 2022, Rule 18f-4 (the "Derivatives Rule") under the Investment Company Act of 1940, as amended (the "1940 Act"), replaced the asset segregation framework previously used by funds to comply with limitations on leverage imposed by the 1940 Act. The Derivatives Rule generally mandates that a fund either limit derivatives exposure to 10% or less of its net assets, or in the alternative implement: (i) limits on leverage calculated based value-at-risk (VAR); (ii) a written derivatives risk management program (DRMP) administered by a derivatives risk manager appointed by the Fund's Board, including a majority of the independent Board members, that is periodically reviewed by the Board; and (iii) new reporting and recordkeeping requirements.

As the Fund's derivative exposure, if any, is 10% or less of its net assets, excluding certain currency and interest rate hedging transactions, the Fund is classified as a limited derivatives user under the Derivatives Rule and will not be subject to the full requirements of the Derivatives Rule as noted above, including VAR testing and stress testing and certain Board reporting requirements. However, the Fund is still required to implement written compliance policies and procedures reasonably designed to manage its derivatives risks and monitor its derivatives exposure daily.

Investing in Securities of Other Investment Companies

The Fund may invest its assets in securities of other investment companies, including the securities of affiliated money market funds, as an efficient means of implementing its investment strategies, managing its uninvested cash and/or other investment reasons consistent with the Fund's investment objective and investment strategies. The Fund may also invest in loan instruments and high-yield instruments primarily by investing in another investment company (which is not available for general investment by the public) that owns those securities and that is advised by an affiliate of the Adviser. The Fund may also invest in such instruments directly. These other investment companies are managed independently of the Fund and incur additional fees and/or expenses which would, therefore, be borne indirectly by the Fund in connection with any such investment. These investments also can create conflicts of interests for the Adviser to the Fund and the investment adviser to the acquired fund. For example, a conflict of interest can arise due to the possibility that the Adviser to the Fund could make a decision to redeem the Fund's investment in the acquired fund. In the case of an investment in an affiliated fund, a conflict of interest can arise if, because of the Fund's investment in the acquired fund, the acquired fund is able to garner more assets, thereby growing the acquired fund and increasing the management fees received by the investment adviser to the acquired fund, which would either be the Adviser or an affiliate of the Adviser. However, the Adviser believes that the benefits and efficiencies of making investments in other investment companies should outweigh the potential additional fees and/or expenses and resulting conflicts of interest. In light of the Fund's investments in other investment companies, other registered investment companies may be limited in their ability to invest in the Fund.

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. The Fund intends to limit its investments in other investment companies, including private funds, to 10% or less. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in SEC rules. In order for a registered investment company to invest in shares of the Fund beyond the limitations of Section 12(d)(1), the registered investment company must enter into an agreement with the Fund.

Securities Lending

The Fund may lend portfolio securities to borrowers that the Adviser deems creditworthy. In return, the Fund receives cash or liquid securities from the borrower as collateral. The borrower must furnish additional collateral if the market value of the loaned securities increases. Also, the borrower must pay the Fund the equivalent of any dividends or interest received on the loaned securities.

The Fund will reinvest cash collateral in highly liquid short-term obligations that qualify as an acceptable investment for the Fund. However, the Fund must pay interest to the borrower for the use of cash collateral. An acceptable investment into which the Fund may reinvest cash collateral includes, among other acceptable investments, securities of affiliated money market funds (including affiliated institutional prime money market funds with a "floating" net asset value that can impose redemption fees and liquidity gates, impose certain operational impediments to investing cash collateral, and, if net asset value decreases, result in the Fund having to cover the decrease in the value of the cash collateral).

Loans are subject to termination at the option of the Fund or the borrower. The Fund will not have the right to vote on securities while they are on loan. However, the Fund will attempt to terminate a loan in an effort to reacquire the securities in time to vote on matters that are deemed to be material by the Adviser. There can be no assurance that the Fund will have sufficient notice of such matters to be able to terminate the loan in time to vote thereon. The Fund may pay administrative and custodial fees in connection with a loan and may pay a negotiated portion of the interest earned on the cash collateral to a securities lending agent or broker. Securities lending activities are subject to interest rate risks and credit risks.

Investment Ratings for Investment-Grade Securities

The Adviser will determine whether a security is investment grade based upon the credit ratings given by one or more NRSROs. For example, Standard & Poor's, an NRSRO, assigns ratings to investment-grade securities (AAA, AA, A and BBB including modifiers, sub-categories and gradations) based on their assessment of the likelihood of the issuer's inability to pay interest or principal (default) when due on each security. Lower credit ratings correspond to higher credit risk. If a security has not received a rating, the Fund must rely entirely upon the Adviser's credit assessment that the security is comparable to investment grade. The presence of a ratings modifier, sub-category or gradation (for example, a (+) or (-)) is intended to show relative standing within the major rating categories and does not affect the security credit rating for purposes of the Fund's investment parameters. If a security is downgraded below the minimum quality grade discussed above, the Adviser will reevaluate the security, but will not be required to sell it.

Investment Ratings for Noninvestment-Grade Securities

Noninvestment-grade securities are rated below BBB- by an NRSRO. These bonds have greater economic, credit and liquidity risks than investment-grade securities.

Additional Information Regarding the Security Selection Process

As part of analysis in its security selection process, among other factors, the Adviser also evaluates whether environmental, social and governance factors could have a positive or negative impact on the risk profiles of many issuers or guarantors in the universe of securities in which the Fund may invest. The Adviser may also consider information derived from active engagements conducted by its in-house stewardship team with certain issuers or guarantors on environmental, social and governance topics. This qualitative analysis does not automatically result in including or excluding specific securities but may be used by Federated Hermes as an additional input in its primary analysis.

What are the Specific Risks of Investing in the Fund?

The following provides general information on the risks associated with the Fund's principal investments. Any additional risks associated with the Fund's non-principal investments are described in the Fund's SAI. The Fund's SAI also may provide additional information about the risks associated with the Fund's principal investments.

INTEREST RATE RISK

Prices of fixed-income securities rise and fall in response to changes in interest rates. Generally, when interest rates rise, prices of fixed-income securities fall. However, market factors, such as the demand for particular fixed-income securities, may cause the price of certain fixed-income securities to fall while the prices of other securities rise or remain unchanged.

The longer the duration of a fixed-income security, the more susceptible it is to interest rate risk. The duration of a fixed-income security may be equal to or shorter than the stated maturity of a fixed-income security. Recent and potential future changes in monetary policy made by central banks and/or their governments are likely to affect the level of interest rates. Duration measures the price sensitivity of a fixed-income security given a change in interest rates. For example, if a fixed-income security has an effective duration of three years, a 1% increase in general interest rates would be expected to cause the security's value to decline about 3% while a 1% decrease in general interest rates would be expected to cause the security's value to increase about 3%.

The impact of interest rate changes on the value of floating rate investments is typically reduced by periodic interest rate resets. Variable and floating rate loans and securities generally are less sensitive to interest rate changes, but may decline in value if their interest rates do not rise as much or as quickly as interest rates in general. Conversely, variable and floating rate loans and securities generally will not increase in value as much as fixed rate debt instruments if interest rates decline.

ISSUER CREDIT RISK

It is possible that interest or principal on securities will not be paid when due. Such non-payment or default may reduce the value of the Fund's portfolio holdings, its share price and its performance.

Many fixed-income securities receive credit ratings from nationally recognized statistical rating organizations (NRSROs) such as Fitch Rating Service, Moody's Investor Services, Inc. and Standard & Poor's that assign ratings to securities by assessing the likelihood of an issuer and/or guarantor default. Higher credit ratings correspond to lower perceived credit risk and lower credit ratings correspond to higher perceived credit risk. Credit ratings may be upgraded or downgraded from time to time as an NRSRO's assessment of the financial condition of a party obligated to make payments with respect to such securities and credit risk changes. The impact of any credit rating downgrade can be uncertain. Credit rating downgrades may lead to increased interest rates and volatility in financial markets, which in turn could negatively affect the value of the Fund's portfolio holdings, its share price and its investment performance. Credit ratings are not a guarantee of quality. Credit ratings may lag behind the current financial conditions of the issuer and/or guarantor and do not provide assurance against default or other loss of money. Credit ratings do not protect against a decline in the value of a security. If a security has not received a rating, the Fund must rely entirely upon the Adviser's credit assessment.

Fixed-income securities generally compensate for greater credit risk by paying interest at a higher rate. The difference between the yield of a security and the yield of a U.S. Treasury security or other appropriate benchmark with a comparable maturity (the "spread") measures the additional interest paid for risk. Spreads may increase generally in response to adverse economic or market conditions. A security's spread may also increase if the security's rating is lowered, or the security is perceived to have an increased credit risk. An increase in the spread will cause the price of the security to decline if interest rates remain unchanged.

COUNTERPARTY CREDIT RISK

Credit risk includes the possibility that a party to a transaction involving the Fund will fail to meet its obligations. This could cause the Fund to lose money or to lose the benefit of the transaction or prevent the Fund from selling or buying other securities to implement its investment strategy.

LIQUIDITY RISK

Trading opportunities are more limited for fixed-income securities that have not received any credit ratings, have received ratings below investment grade or are not widely held.

Trading opportunities are more limited for CMOs that have complex terms or that are not widely held. These features may make it more difficult to sell or buy a security at a favorable price or time. Consequently, the Fund may have to accept a lower price to sell a security, sell other securities to raise cash or give up an investment opportunity, any of which could have a negative effect on the Fund's performance. Infrequent trading of securities may also lead to an increase in their price volatility.

Liquidity risk also refers to the possibility that the Fund may not be able to sell a security or close out a derivative contract when it wants to. If this happens, the Fund will be required to continue to hold the security or keep the position open and the Fund could incur losses.

OTC derivative contracts generally carry greater liquidity risk than exchange-traded contracts. This risk may be increased in times of financial stress, if the trading market for OTC derivative contracts becomes restricted.

RISK OF FOREIGN INVESTING

Foreign securities pose additional risks because foreign economic or political conditions may be less favorable than those of the United States. Securities in foreign markets may also be subject to taxation policies that reduce returns for U.S. investors.

Foreign companies may not provide information (including financial statements) as frequently or to as great an extent as companies in the United States. Foreign companies may also receive less coverage than U.S. companies by market analysts and the financial press. In addition, foreign countries may lack uniform accounting, auditing and financial reporting standards or regulatory requirements comparable to those applicable to U.S. companies. These factors may prevent the Fund and its Adviser from obtaining information concerning foreign companies that is as frequent, extensive and reliable as the information available concerning companies in the United States.

Foreign countries may have restrictions on foreign ownership of securities or may impose exchange controls, capital flow restrictions or repatriation restrictions which could adversely affect the liquidity of the Fund's investments.

CALL RISK

Call risk is the possibility that an issuer may redeem a fixed-income security before maturity (a "call") at a price below its current market price. An increase in the likelihood of a call may reduce the security's price.

If a fixed-income security is called, the Fund may have to reinvest the proceeds in other fixed-income securities with lower interest rates, higher credit risks or other less favorable characteristics.

RISK ASSOCIATED WITH NONINVESTMENT-GRADE SECURITIES

Securities rated below investment grade, also known as junk bonds, generally entail greater economic, credit and liquidity risks than investment-grade securities. For example, their prices are more volatile, economic downturns and financial setbacks may affect their prices more negatively, and their trading market may be more limited. These securities are considered speculative with respect to the issuer's ability to pay interest and repay principal.

UNDERLYING FUND RISK

The risk that the Fund's performance is closely related to the risks associated with the securities and other investments held by underlying funds and that the ability of a Fund to achieve its investment objective will depend upon the ability of underlying funds to achieve their respective investment objectives. The Fund bears Underlying Fund fees and expenses indirectly.

ETF RISK

As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. To the extent that the Fund invests in instruments that trade outside of a collateralized settlement system, it may have a limited number of financial institutions that act as Authorized Participants. To the extent they cannot or are otherwise unwilling to engage in creation and redemption transactions with the Fund and no other Authorized Participant steps in, trading in Shares of the Fund may be significantly diminished, bid-ask spreads may widen, and the market price of Shares may represent a significant discount to net asset value (NAV). Shares may also face delisting from the Exchange.

Premium/Discount Risk. The NAV of the Fund's Shares will generally fluctuate with changes in the market value of the Fund's securities holdings. The market prices of Fund Shares will generally fluctuate in accordance with changes in the Fund's NAV and supply and demand of Shares on the secondary market. It cannot be predicted whether Fund Shares will trade below, at or above their NAV, and when bid-ask spreads widen. As a result, shareholders of the Fund may pay more than NAV when purchasing Shares and receive less than NAV when selling Fund Shares. This risk is heightened in times of market volatility and steep market declines, particularly to the extent that the Fund's portfolio holdings are or become illiquid. In such market conditions, market or stop-loss orders to sell the ETF Shares may be executed at market prices that are significantly below that day's NAV, as subsequently calculated. In addition, Authorized Participants and/or market makers in the Fund's Shares may step away from the market, resulting in a disruption to creations and redemptions, which may result in trading prices that differ significantly from the Fund's NAV. In addition, market prices of Fund Shares may deviate significantly from the NAV if the number of Fund Shares outstanding is small, such that there is less active trading in Fund Shares. Investors purchasing and selling Fund Shares in the secondary market may not experience investment results consistent with those experienced by those creating and redeeming directly with the Fund.

Secondary Market Trading Risk. Investors buying or selling Shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of Shares. In addition, secondary market investors will incur the cost of the difference between the price that an investor is willing to pay for Shares (the bid price) and the price at which an investor is willing to sell Shares (the ask price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if the Fund's Shares have more trading volume and market liquidity and higher if the Fund's Shares have little trading volume and market liquidity. Increased market volatility may cause increased bid/ask spreads.

Although Fund Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained, that bid-ask spreads will be narrow, or that the Fund's Shares will continue to be listed. Trading in Fund Shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares is subject to trading halts caused by extraordinary market volatility pursuant to Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of any Fund will continue to be met or will remain unchanged or that the Shares will trade with any volume, or at all.

Cash Transactions Risk. Like other ETFs, the Fund sells and redeems its Shares only in large blocks called Creation Units and only to Authorized Participants. Unlike most other ETFs, however, the Fund expects to effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities.

Other ETFs generally are able to make in-kind redemptions and avoid realizing gains in connection with redemption requests. Effecting redemptions for cash may cause the Fund to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. Such dispositions may occur at an inopportune time, resulting in potential losses to the Fund or difficulties in meeting shareholder redemptions, and involve transaction costs. If the Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized if it were to distribute portfolio securities in-kind or to recognize such gain sooner than would otherwise have been required. The Fund generally intends to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in another ETF.

In addition, cash transactions may have to be carried out over several days if the securities market in which the Fund is trading is less liquid and may involve considerable transaction expenses and taxes. These brokerage fees and taxes, which will be higher than if the Fund sold and redeemed its Shares principally in-kind, may be passed on to purchasers and redeemers of Creation Units in the form of creation and redemption transaction fees. However, the Fund has capped the total fees that may be charged in connection with the redemption of Creation Units at 2% of the value of the Creation Units redeemed. To the extent transaction and other costs associated with a redemption exceed that cap, those transaction costs will be borne by the Fund's remaining shareholders. These factors may result in wider spreads between the bid and the offered prices of the Fund's Shares than for other ETFs.

LEVERAGE RISK

Leverage risk is created when an investment, which includes, for example, an investment in a derivative contract, exposes the Fund to a level of risk that exceeds the amount invested. Changes in the value of such an investment magnify the Fund's risk of loss and potential for gain. Investments can have these same results if their returns are based on a multiple of a specified index, security or other benchmark.

RISK OF INVESTING IN DERIVATIVE CONTRACTS

The Fund's exposure to derivative contracts (either directly or through its investment in another investment company) involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. First, changes in the value of the derivative contracts in which the Fund invests may not be correlated with changes in the value of the underlying Reference Instruments or, if they are correlated, may move in the opposite direction than originally anticipated. Second, while some strategies involving derivatives may reduce the risk of loss, they may also reduce potential gains or, in some cases, result in losses by offsetting favorable price movements in portfolio holdings. Third, there is a risk that derivative contracts may be erroneously priced or improperly valued and, as a result, the Fund may need to make increased cash payments to the counterparty. Fourth, exposure to derivative contracts may have tax consequences to the Fund and its shareholders. For example, derivative contracts may cause the Fund to realize increased ordinary income or short-term capital gains (which are treated as ordinary income for Federal income tax purposes) and, as a result, may increase taxable distributions to shareholders. In addition, under certain circumstances certain derivative contracts may cause the Fund to: (a) incur an excise tax on a portion of the income related to those contracts; and/or (b) reclassify, as a return of capital, some or all of the distributions previously made to shareholders during the fiscal year as dividend income. Fifth, a common provision in OTC derivative contracts permits the counterparty to terminate any such contract between it and the Fund, if the value of the Fund's total net assets declines below a specified level over a given time period. Factors that may contribute to such a decline (which usually must be substantial) include significant shareholder redemptions and/or a marked decrease in the market value of the Fund's investments. Any such termination of the Fund's OTC derivative contracts may adversely affect the Fund (for example, by increasing losses and/or costs, and/or preventing the Fund from fully implementing its investment strategies). Sixth, the Fund may use a derivative contract to benefit from a decline in the value of a Reference Instrument. If the value of the Reference Instrument declines during the term of the contract, the Fund makes a profit on the difference (less any payments the Fund is required to pay under the terms of the contract). Any such strategy involves risk. There is no assurance that the Reference Instrument will decline in value during the term of the contract and make a profit for the Fund. The Reference Instrument may instead appreciate in value creating a loss for the Fund. Seventh, a default or failure by a CCP or an FCM (also sometimes called a "futures broker"), or the failure of a contract to be transferred from an Executing Dealer to the FCM for clearing, may expose the Fund to losses, increase its costs, or prevent the Fund from entering or exiting derivative positions, accessing margin, or fully implementing its investment strategies. The central clearing of a derivative and trading of a contract over a SEF could reduce the liquidity in, or increase costs of entering into or holding, any contracts. Finally, derivative contracts may also involve other risks described in this Prospectus, such as interest rate, credit, liquidity and leverage risks.

RISK RELATED TO THE ECONOMY

The value of the Fund's portfolio may decline in tandem with a drop in the overall value of the markets in which the Fund invests and/or other markets based on negative developments in the U.S. and global economies. Economic, political and financial conditions, or industry or economic trends and developments, may, from time to time, and for varying periods of time, cause volatility, illiquidity or other potentially adverse effects in the financial markets, including the fixed-income market. The commencement, continuation or ending of government policies and economic stimulus programs, changes in monetary policy, increases or decreases in interest rates, or other factors or events that affect the financial markets, including the fixed-income markets, may contribute to the development of or increase in volatility, illiquidity, shareholder redemptions and other adverse effects which could negatively impact the Fund's performance. For example, the value of certain portfolio securities may rise or fall in response to changes in interest rates, which could result from a change in government policies, and has the potential to cause investors to move out of certain portfolio securities, including fixed-income securities, on a large scale. This may increase redemptions from funds that hold large amounts of certain securities and may result in decreased liquidity and increased volatility in the financial markets. Market factors, such as the demand for particular portfolio securities, may cause the price of certain portfolio securities to fall while the prices of other securities rise or remain unchanged.

Epidemic and Pandemic Risk

An outbreak of respiratory disease caused by a novel coronavirus was first detected in China in late 2019 and subsequently spread globally. This coronavirus has resulted in, and may continue to result in, closed borders, enhanced health screenings, disruptions to healthcare service preparation and delivery, quarantines, cancellations and disruptions to supply chains, workflow operations and consumer activity, as well as general concern and uncertainty. The impact of this coronavirus has resulted in substantial economic volatility. Health crises caused by outbreaks, such as the coronavirus outbreak, may exacerbate other pre-existing political, social and economic risks. The impact of this outbreak, and other epidemics and pandemics that may arise in the future, could continue to negatively affect the worldwide economy, as well as the economies of individual countries, individual companies, including certain Fund service providers and issuers of the Fund's investments, and the markets in general in significant and unforeseen ways. In addition, governments, their regulatory agencies, or self-regulatory organizations may take actions in response to the pandemic, including significant fiscal and monetary policy changes, that may affect the instruments in which the Fund invests or the issuers of such instruments. Any such impact could adversely affect the Fund's performance.

MBS RISK

MBS have unique risks. A rise in interest rates may cause the value of MBS held by the Fund to decline. The mortgage loans underlying MBS generally are subject to a greater rate of principal prepayments in a declining interest rate environment and to a lesser rate of principal prepayments in an increasing interest rate environment. If the underlying mortgages are paid off sooner than expected, the Fund may have to reinvest this money in mortgage-backed or other securities that have lower yields. Hybrid ARMs also involve special risks. Like ARMs, hybrid ARMs have periodic and lifetime limitations on the increases that can be made to the interest rates that mortgagors pay. Therefore, if during a floating rate period, interest rates rise above the interest rate limits of the hybrid ARM, the Fund will not benefit from further increases in interest rates. See "Prepayment and Extension Risk" and "Interest Rate Risk." CMOs with complex or highly variable prepayment terms generally entail greater market, prepayment and liquidity risks than other MBS. For example, their prices are more volatile and their trading market may be more limited.

MBS are subject to the risk that payments made on a security will not be made when due. Payments on MBS are primarily derived from the interest and principal payments of the underlying mortgages. Some MBS also have guarantees or other structural features that provide additional support for interest and principal payments on the MBS if payments on the underlying mortgages are not made. MBS are subject to the risk that the underlying mortgage borrowers fail to make timely payments of interest and principal and that any guarantee or other structural feature, if present, is insufficient to enable the timely payment of interest and principal on the MBS. The structure of certain CMO interests held by the Fund may cause the Fund to be paid interest and/or principal on its investment only after holders of other interests in that particular CMO have received the full repayment of principal or interest on their investments. MBS are most commonly issued or guaranteed by GSEs, but also may be issued or guaranteed by private entities, which generally entail greater risk. Certain MBS issued by GSEs are not backed by or entitled to the full faith and credit of the U.S. government, but are, however, supported through federal subsidies, loans or other benefits. The Fund also may invest in certain MBS issued by GSEs that have no explicit financial support, and are supported only by the credit of the applicable GSEs (in addition to the underlying mortgages and related debt service payments). The U.S. government has provided financial support to Freddie Mac and Fannie Mae, but there is no assurance that it will support these or other GSEs in the future. Although certain MBS are guaranteed as to timely payment of interest and principal by a GSE, the market prices for such securities are not guaranteed and will fluctuate.

PREPAYMENT AND EXTENSION RISK

Unlike traditional fixed-income securities, which pay a fixed rate of interest until maturity (when the entire principal amount is due), payments on mortgage-backed securities include both interest and a partial payment of principal. Partial payment of principal may be comprised of scheduled principal payments as well as unscheduled payments from the voluntary prepayment, refinancing or foreclosure of the underlying loans. These unscheduled prepayments of principal create risks that can adversely affect a fund holding mortgage-backed securities.

For example, when interest rates decline, the values of mortgage-backed securities generally rise. However, when interest rates decline, unscheduled prepayments can be expected to accelerate, and the Fund would be required to reinvest the proceeds of the prepayments at the lower interest rates then available. Unscheduled prepayments would also limit the potential for capital appreciation on mortgage-backed securities.

Conversely, when interest rates rise, the values of mortgage-backed securities generally fall. Since rising interest rates typically result in decreased prepayments, this could lengthen the average lives of mortgage-backed securities, and cause their value to decline more than traditional fixed-income securities.

Generally, mortgage-backed securities compensate for the increased risk associated with prepayments by paying a higher yield. The additional interest paid for risk is measured by the difference between the yield of a mortgage-backed security and the yield of a U.S. Treasury security or other appropriate benchmark with a comparable maturity (the “spread”). An increase in the spread will cause the price of the mortgage-backed security to decline. Spreads generally increase in response to adverse economic or market conditions. Spreads may also increase if the security is perceived to have an increased prepayment risk or is perceived to have less market demand.

SECTOR RISK

Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the possibility that a certain sector may underperform other sectors or the market as a whole. To the extent the Fund invests in a particular sector or sectors, its performance will be more susceptible to economic, business or other developments and risks affecting that sector. Such factors may vary depending upon the sector and economic conditions at the time.

TECHNOLOGY RISK

The Adviser uses various technologies in managing the Fund, consistent with its investment objective(s) and strategy described in this Prospectus. For example, proprietary and third-party data and systems are utilized to support decision-making for the Fund. Data imprecision, software or other technology malfunctions, programming inaccuracies and similar circumstances may impair the performance of these systems, which may negatively affect Fund performance.

What Do Shares Cost?

CALCULATION OF NET ASSET VALUE

The Fund’s net asset value of a Share (NAV) is determined as of the end of regular trading on the New York Stock Exchange (NYSE) (normally 4:00 p.m. Eastern time) each day the NYSE is open. The Fund calculates the NAV by valuing its assets, subtracting its liabilities and dividing the balance by the number of Shares outstanding. The Fund’s current NAV and/or public offering price may be found at FederatedHermes.com/us, via online news sources and in certain newspapers.

When the Fund holds securities that trade principally in foreign markets on days the NYSE is closed, the value of the Fund’s assets may change on days you cannot purchase or redeem Shares. This may also occur when the U.S. markets for fixed-income securities are open on a day the NYSE is closed.

In calculating its NAV, the Fund generally values investments as follows:

- Fixed-income securities are fair valued using price evaluations provided by a pricing service approved by the Adviser.
- Derivative contracts listed on exchanges are valued at their reported settlement or closing price, except that options are valued at the mean of closing bid and ask quotations.
- Over-the-counter (OTC) derivative contracts are fair valued using price evaluations provided by a pricing service approved by the Adviser.

If any price, quotation, price evaluation or other pricing source is not readily available when the NAV is calculated, if the Fund cannot obtain price evaluations from a pricing service or from more than one dealer for an investment within a reasonable period of time as set forth in the Adviser’s valuation policies and procedures, or if information furnished by a pricing service, in the opinion of the Valuation Committee, is deemed not representative of the fair value of such security, the Fund uses the fair value of the investment determined in accordance with the procedures generally described below. There can be no assurance that the Fund could obtain the fair value assigned to an investment if it sold the investment at approximately the time at which the Fund determines its NAV per share.

Shares of other funds are valued based upon their reported NAVs. The prospectuses for these funds explain the circumstances under which they will use fair value pricing and the effects of using fair value pricing.

FAIR VALUATION AND SIGNIFICANT EVENTS PROCEDURES

Pursuant to Rule 2a-5 under the Investment Company Act of 1940, the Board of Trustees (Board) has designated the Adviser as the Fund’s valuation designee to perform the fair valuation determination for securities and other assets held by the Fund. The Adviser, acting through its “Valuation Committee,” is responsible for determining the fair value of investments for which market quotations are not readily available. The Valuation Committee is comprised of officers of the Adviser and certain of the Adviser’s affiliated companies and determines fair value and oversees the calculation of the NAV. The Valuation Committee is subject to Board oversight and certain reporting and other requirements intended to provide the Board the information it needs to oversee the Adviser’s fair value determinations.

The Valuation Committee is also authorized to use pricing services to provide fair price evaluations of the current fair value of certain investments for purposes of calculating the NAV. In the event that market quotations and price evaluations are not available for an investment, the Valuation Committee determines the fair value of the investment in accordance with procedures adopted by the Adviser as the valuation designee. The Board periodically reviews the fair valuations made by the Valuation Committee. The Board has also approved the Adviser's fair valuation and significant events procedures as part of the Fund's compliance program and will review any changes made to the procedures. The Fund's SAI discusses the methods used by pricing services and the Valuation Committee in valuing investments.

Using fair value to price investments may result in a value that is different from an investment's most recent closing price and from the prices used by other registered funds to calculate their NAVs. The application of the fair value procedures to an investment represents a good faith determination of such investment's fair value. There can be no assurance that the Fund could obtain the fair value assigned to an investment if it sold the investment at approximately the time at which the Fund determines its NAV per share, and the actual value could be materially different.

The Adviser also has adopted procedures requiring an investment to be priced at its fair value whenever the Valuation Committee determines that a significant event affecting the value of the investment has occurred between the time as of which the price of the investment would otherwise be determined and the time as of which the NAV is computed. An event is considered significant if there is both an affirmative expectation that the investment's value will change in response to the event and a reasonable basis for quantifying the resulting change in value.

Examples of significant events that may occur after the close of the principal market on which a security is traded, or after the time of a price evaluation provided by a pricing service or a dealer, include:

- Political or other developments affecting the economy or markets in which an issuer conducts its operations or its securities are traded; and
- Announcements concerning matters such as acquisitions, recapitalizations or litigation developments or a natural disaster affecting the issuer's operations or regulatory changes or market developments affecting the issuer's industry.

For other significant events, the Fund may seek to obtain more current quotations or price evaluations from alternative pricing sources. If a reliable alternative pricing source is not available, the Valuation Committee will determine the fair value of the investment. The Board periodically reviews fair valuations made in response to significant events.

The fair valuation of securities following a significant event can serve to reduce arbitrage opportunities for short-term traders to profit at the expense of long-term investors in the Fund. For example, such arbitrage opportunities may exist when the market on which portfolio securities are traded closes before the Fund calculates its NAV, which is typically the case with Asian and European markets. However, there is no assurance that these significant event procedures will prevent dilution of the NAV by short-term traders.

How Do You Buy and Sell Shares?

INDIVIDUAL SHARES

Shares of the Fund are listed for trading on a national securities exchange during the trading day. The Fund's primary listing exchange is NYSE Arca. Shares can be bought and sold throughout the trading day like Shares of other publicly traded companies, and when you buy or sell the Fund's Shares in the secondary market, you will pay or receive the market price. However, there can be no guarantee that an active trading market will develop or be maintained, or that the Fund Shares listing will continue or remain unchanged. Buying or selling the Fund's Shares involves certain costs that apply to all securities transactions. For example, when buying or selling Shares of the Fund through a financial intermediary, you may incur a brokerage commission or other charges determined by your financial intermediary. The commission is frequently a fixed amount and may be a significant cost for investors seeking to buy or sell small amounts of Shares. In addition, you may also incur the cost of the spread (the difference between the bid price (the price secondary market investors are willing to pay for Shares) and the ask price (the price at which secondary market investors are willing to sell Shares)). The spread varies over time for Shares of the Fund based on its trading volume and market liquidity, and is generally less if the Fund has more trading volume and market liquidity and more if the Fund has less trading volume and market liquidity.

CREATIONS AND REDEMPTIONS

Shares of the Fund may only be acquired through the Distributor and redeemed directly with the Fund by or through an Authorized Participant in Creation Units or multiples thereof. A Creation Unit is comprised of 10,000 Shares, as discussed in the "Creation and Redemption of Creation Units" section of the SAI. "Authorized Participants" are registered clearing agents that enter into an agreement with the Distributor to transact in Creation Units. For a list of the Fund's Authorized Participants, contact the Distributor at 888-400-7838. Once created, Shares of the Fund normally trade in the secondary market in amounts less than a Creation Unit.

The Fund is open on every “Business Day,” which is any day the NYSE is open. The New York Stock Exchange (NYSE) is open for trading Monday through Friday and is closed on the following holidays: New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. On days when the NYSE closes earlier than normal, the Fund may require orders to create or redeem Creation Units to be placed earlier in the day. See the “Creation and Redemption of Creation Units” section of the SAI.

Purchases and redemptions of Creation Units will take place in-kind and/or for cash at the discretion of the Fund. The determination of whether purchases and redemptions of Creation Units will be for cash or in-kind depends primarily on the regulatory requirements and settlement mechanisms relevant to the Fund’s portfolio holdings and the Fund is not limited to engaging in in-kind transactions to any particular market circumstances. As further described in the SAI, Creation Units typically are issued on a two Business Days (“T+2”) basis after a purchase order has been received in good order and the transfer of good title to the Fund of any in-kind securities and/or cash required to purchase a Creation Unit have been completed (subject to certain exceptions). Similarly, and also as further described in the SAI, deliveries of redemption proceeds by the Fund generally will be made on a T+2 basis after a redemption order has been received in good order and the requisite number of Fund Shares have been delivered (subject to certain exceptions). The Fund reserves the right to settle Creation Unit transactions on a basis other than T+2 in order to, among other matters, accommodate non-U.S. market holiday schedules, closures and settlement cycles, to account for different treatment among non-U.S. and U.S. markets of dividend record dates and ex-dividend dates (i.e., the last day the holder of a security can sell the security and still receive dividends payable on the security) and in certain other circumstances. The Fund may delay settlement for up to 15 days from the date an order has been submitted in good order and the requisite cash and/or assets delivered to the relevant Fund to accommodate foreign holidays, as further described in the SAI, and otherwise may delay redemptions up to seven days or longer as permitted by applicable law, regulations and interpretations, such as where unusual market conditions affect the NYSE or an emergency exists which makes it impracticable for the Fund to dispose of or value securities it owns or the Fund has received an SEC exemptive order.

The Fund intends to comply with the U.S. federal securities laws in accepting securities for deposit and satisfying redemptions with redemption securities by, among other means, assuring that any securities accepted for deposit and any securities used to satisfy redemption requests will be sold in transactions that would be exempt from registration under the Securities Act. Further, an Authorized Participant that is not a “qualified institutional buyer,” as such term is defined under Rule 144A of the Securities Act, will not be able to receive restricted securities eligible for resale under Rule 144A.

For more information on how to buy and sell Shares of the Fund, call 1-800-341-7400 or visit FederatedHermes.com/us.

SHARE TRADING PRICES

The trading prices of the Fund’s Shares listed on its Exchange may differ from the Fund’s daily NAV and will normally be affected by market forces, such as supply and demand, economic conditions, the market value of the Fund’s disclosed portfolio holdings and other factors. As a result, trading prices may be lower, higher or the same as the Fund’s NAV; and investors may pay more than NAV when buying Shares and receive less than NAV when selling Shares through the Exchange.

BOOK ENTRY

Shares of the Fund are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (DTC) or its nominee is the record owner of all outstanding Shares of the Fund and is recognized as the owner of all Shares for all purposes.

Investors owning Shares of the Fund are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for Shares of the Fund. DTC participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other exchange-traded securities that you hold in book-entry or “street name” form.

PREMIUM/DISCOUNT INFORMATION

The NAV of the Fund will fluctuate with changes in the market value of its portfolio holdings. The market price of the Fund will fluctuate in accordance with changes in its NAV, as well as market supply and demand.

There may be differences – premiums or discounts – between the daily market prices on secondary markets for Shares of the Fund and the Fund’s NAV. NAV is the price per share at which the Fund issues and redeems Shares. The Fund’s market price may be at, above or below its NAV. A premium is the amount that the Fund is trading above the reported NAV, expressed as a percentage of the NAV. A discount is the amount that the Fund is trading below the reported NAV, expressed as a percentage of the NAV. A discount or premium could be significant. Information regarding the Fund’s NAV, market price and daily premiums or discounts can be found at <https://www.federatedhermes.com/products/exchange-traded-funds/short-duration-corporate-etf.do>.

INVESTMENTS BY REGISTERED INVESTMENT COMPANIES

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including Shares of the Fund. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions, including that such investment companies enter into an agreement with the Fund.

CONTINUOUS OFFERING

The method by which Creation Units of Fund Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of Shares are issued and sold by the Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act, may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares and sells the Shares directly to customers or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in Shares, whether or not participating in the distribution of Shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the Shares that are part of an over-allotment within the meaning of Section 4(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

Dealers effecting transactions in the Fund’s Shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Payments to Financial Intermediaries

The Fund and its affiliated service providers may pay fees as described below to financial intermediaries (such as broker-dealers, banks, investment advisers or third-party administrators) whose customers are shareholders of the Fund.

RULE 12b-1 FEES

The Board has adopted a Rule 12b-1 Plan, which allows payment of marketing fees of up to 0.25% of the Fund’s average net assets. Because these fees would be paid out of the Fund’s assets on an on-going basis, over time these fees would increase the cost of your investment. The Fund’s Shares have no present intention of paying, accruing or incurring any Rule 12b-1 Fees until such time as approved by the Fund’s Board of Trustees.

ADDITIONAL PAYMENTS TO FINANCIAL INTERMEDIARIES

The Distributor may pay out of its own resources amounts to certain financial intermediaries, including broker-dealers, banks, registered investment advisers, independent financial planners and retirement plan administrators, that support the sale of Shares or provide services to Fund shareholders. The amounts of these payments could be significant, and may create an incentive for the financial intermediary or its employees or associated persons to recommend or sell Shares of the

Fund to you. Not all financial intermediaries receive such payments, and the amount of compensation may vary by intermediary. In some cases, such payments may be made by or funded from the resources of companies affiliated with the Distributor (including the Adviser). These payments are not reflected in the fees and expenses listed in the fee table section of the Fund's Prospectus and described above because they are not paid by the Fund.

These payments are negotiated and may be based on such factors as: the number or value of Shares that the financial intermediary sells or may sell; the value of client assets invested; the level and types of services or support furnished by the financial intermediary; or the Fund's and/or other Federated Hermes funds' relationship with the financial intermediary. These payments may be in addition to payments, as described above, made by the Fund to the financial intermediary. In connection with these payments, the financial intermediary may elevate the prominence or profile of the Fund and/or other Federated Hermes funds, within the financial intermediary's organization by, for example, placement on a list of preferred or recommended funds and/or granting the Distributor preferential or enhanced opportunities to promote the funds in various ways within the financial intermediary's organization. You can ask your financial intermediary for information about any payments it receives from the Distributor or the Fund and any services provided, as well as about fees and/or commissions it charges.

Account and Share Information

FUND DISTRIBUTIONS

The Fund distributes substantially all of its net investment income to shareholders in the form of dividends. The Fund intends to declare and distribute income dividends monthly to shareholders of record. In addition, the Fund distributes any net capital gains earned from the sale of portfolio securities to shareholders no less frequently than annually. Net short-term capital gains may be paid more frequently. Dividend payments are made through DTC participants and indirect participants to beneficial owners then of record with proceeds received from the Fund.

No dividend reinvestment service is provided by the Trust. Financial intermediaries may make available the DTC book-entry Dividend Reinvestment Service for use by beneficial owners of Fund Shares for reinvestment of their dividend distributions. Beneficial owners should contact their financial intermediary to determine the availability and costs of the service and the details of participation therein. Financial intermediaries may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and net capital gains will be automatically reinvested in additional whole Shares of the Fund purchased in the secondary market.

TAX INFORMATION

The Fund and/or your financial intermediary provides year-end tax information and an annual statement of your account activity to assist you in completing your federal, state and local tax returns. Fund distributions of dividends and capital gains are taxable to you whether paid in cash or reinvested in the Fund. Dividends are taxable at different rates depending on the source of dividend income. Distributions of net short-term capital gains are taxable to you as ordinary income. Distributions of net long-term capital gains are taxable to you as long-term capital gains regardless of how long you have owned your Shares.

Fund distributions are expected to be primarily dividends. Redemptions and exchanges are taxable sales. Please consult your tax adviser regarding your federal, state and local tax liability.

Taxes on Creations and Redemptions of Creation Units

A person who purchases a Creation Unit by exchanging securities in-kind generally will recognize a gain or loss equal to the difference between: (i) the sum of the market value of the Creation Units at the time of the exchange and any net amount of cash received by the Authorized Participant in the exchange; and (ii) the sum of the purchaser's aggregate basis in the securities surrendered and any net amount of cash paid for the Creation Units. A person who redeems Creation Units and receives securities in-kind from the Fund will generally recognize a gain or loss equal to the difference between the redeemer's basis in the Creation Units, and the aggregate market value of the securities received and any net cash received. The IRS, however, may assert that a loss realized upon an in-kind exchange of securities for Creation Units or an exchange of Creation Units for securities cannot be deducted currently under the rules governing "wash sales," or on the basis that there has been no significant change in economic position. Persons effecting in-kind creations or redemptions should consult their own tax adviser with respect to these matters. The Fund has the right to reject an order for Creation Units if the purchaser (or a group of purchasers) would, upon obtaining the Shares so ordered, own 80% or more of the outstanding Shares of the Fund and if, pursuant to section 351 of the Code, the Fund would have a basis in the deposit securities different from the market value of such securities on the date of deposit. The Fund also has the right to require information necessary to determine beneficial share ownership for purposes of the 80% determinations.

FREQUENT TRADING POLICIES

As described above, when buying or selling shares of the Fund through a financial intermediary, you may incur a brokerage commission or other charges determined by your financial intermediary. Due to these brokerage costs, if any, frequent buying and selling of Fund Shares on the secondary market may detract significantly from investment returns.

The Trust's Board of Trustees has determined not to adopt policies and procedures designed to prevent or monitor for frequent purchases and redemptions of the Fund's shares because the Fund sells and redeems its shares at NAV only in Creation Units pursuant to the terms of an Authorized Participant Agreement between the Authorized Participant and the Distributor, and such direct trading between the Fund and Authorized Participants is critical to ensuring that the Fund's shares trade at or close to NAV. Further, the vast majority of trading in Fund shares occurs on the secondary market, which does not involve the Fund directly and therefore does not cause the Fund to experience many of the harmful effects of market timing, such as dilution and disruption of portfolio management. In addition, the Fund imposes a transaction fee on Creation Unit transactions, which is designed to offset transfer and other transaction costs incurred by the Fund in connection with the issuance and redemption of Creation Units and may employ fair valuation pricing to minimize potential dilution from market timing. The Fund reserves the right to reject any purchase order at any time and reserves the right to impose restrictions on disruptive, excessive, or short-term trading.

PORTFOLIO HOLDINGS INFORMATION

A description of the Trust's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the Fund's Statement of Additional Information. The Fund discloses its portfolio holdings daily at FederatedHermes.com/us. Fund fact sheets are also available on FederatedHermes.com/us and provide information regarding the Fund's top holdings. Other information may be requested by calling 1-800-341-7400.

Declaration of Trust Provisions

The Board has adopted, and from time to time amends, an Amended and Restated Declaration of Trust for the Trust and the Fund, which governs its operations and by which each shareholder shall be held expressly to have agreed to be bound by the provisions thereof.

The Fund's Declaration of Trust also places limitations on the forum in which claims against the Trust may be heard and includes a waiver of a jury trial. Other than federal securities law claims, claims against the Trust are required to be brought in the Court of Chancery of the State of Delaware to the extent there is subject matter jurisdiction in such court for the claims asserted or, if not, then in the Superior Court of the State of Delaware. Accordingly, shareholders may be required to bring claims in an inconvenient or less favorable forum.

Who Manages the Fund?

The Board governs the Fund. The Board selects and oversees the Adviser, Federated Investment Management Company. The Adviser manages the Fund's assets, including buying and selling portfolio securities. Federated Advisory Services Company (FASC), an affiliate of the Adviser, provides certain support services to the Adviser. The fee for these services is paid by the Adviser and not by the Fund. The address of the Adviser and FASC is 1001 Liberty Avenue, Pittsburgh, PA 15222-3779.

The Fund has received and can rely upon an order from the Securities and Exchange Commission (SEC) that permits the Adviser, subject to approval by the Board of Trustees, to appoint a sub-adviser or change the terms of a sub-advisory agreement without obtaining shareholder approval. The Fund is permitted to rely upon the SEC order to change sub-advisers, or the fees paid to a sub-adviser, without the expense and delays associated with obtaining shareholder approval of the change. This order does not, however, permit the Adviser to increase the aggregate advisory fee rate of the Fund without the approval of the shareholders.

The Adviser and other advisory subsidiaries of Federated Hermes combined, advise approximately 102 registered investment companies spanning equity, fixed-income and money market mutual funds and also manage a variety of other pooled investment vehicles, private investment companies and customized separately managed accounts (including non-U.S./offshore funds). Federated Hermes' assets under management totaled approximately \$668.9 billion as of December 31, 2022. Federated Hermes was established in 1955 as Federated Investors, Inc. and is one of the largest investment managers in the United States with nearly 2,000 employees. Federated Hermes provides investment products to more than 11,000 investment professionals and institutions.

The Adviser advises approximately 73 registered investment companies and also manages sub-advised funds. The Adviser's assets under management totaled approximately \$399.6 billion as of December 31, 2022.

PORTFOLIO MANAGEMENT INFORMATION

The Fund's portfolio managers are jointly and primarily responsible for day to day management of the Fund.

John Gentry

John Gentry, CFA, Senior Portfolio Manager, has been the Fund's portfolio manager since its inception in December of 2021.

Mr. Gentry is Head of the Corporate Fixed Income Group. He is responsible for day to day management of the Fund focusing on asset allocation, interest rate strategy and security selection. He has been with the Adviser or an affiliate since 1995; has worked in investment management since 1990; has managed investment portfolios since 1997. Education: B.A., University of Virginia; M.B.A., Cornell University.

Robert Matthews

Robert Matthews, CFA, Portfolio Manager, has been the Fund's portfolio manager since its inception in December of 2021.

Mr. Matthews is responsible for day to day management of the Fund focusing on asset allocation and security selection. He has been with the Adviser or an affiliate since 2007; has worked in investment management since 2010; has managed investment portfolios since 2018. Education: B.S., Washington & Jefferson College; M.B.A., Robert Morris University.

The Fund's SAI provides additional information about the Portfolio Managers' compensation, management of other accounts and ownership of securities in the Fund.

ADVISORY FEES

The Fund's investment advisory contract provides for payment to the Adviser of an annual investment advisory fee of 0.39% of the Fund's average daily net assets. The Adviser may contractually or voluntarily waive a portion of its fee or reimburse the Fund for certain operating expenses. The Adviser and its affiliates have also agreed to certain "Fee Limits" as described in the footnote to the "Risk/Return Summary: Fees and Expenses" table found in the "Fund Summary" section of the Prospectus.

Under the Investment Advisory Agreement between the Trust and the Adviser, the Adviser is responsible for reviewing, supervising and administering the Fund's investment program and the general management and administration of the Trust. In this regard, among other things, the Adviser arranges for transfer agency, custody, fund administration and accounting, and other non-distribution related services necessary for the Fund to operate. The Adviser may engage a sub-adviser to assist it in managing the Fund's investments, but will be responsible for overseeing any sub-advisers. The Adviser manages the Fund's business affairs, provides office facilities and equipment and certain clerical, bookkeeping and administrative services, and permits its officers and employees to serve as officers or Trustees of the Trust. Under the Investment Advisory Agreement, the Adviser bears all of its own costs associated with providing advisory services to the Fund. In addition, the Adviser has contractually agreed to pay all operating expenses of the Fund, except: (i) interest and taxes (including, but not limited to, income, excise, transaction, transfer and withholding taxes) and registration fees and expenses; (ii) expenses of the Fund incurred with respect to the acquisition and disposition of portfolio securities and the execution of portfolio transactions, including brokerage commissions and short sale dividend or interest expense; (iii) expenses incurred in connection with any distribution plan adopted by the Trust in compliance with Rule 12b-1 under the 1940 Act, including distribution fees; (iv) Acquired Fund Fees and Expenses; (v) litigation expenses; (vi) proxy-related expenses; (vii) tax reclaim recovery expenses; and (viii) any expenses determined to be extraordinary expenses. Nevertheless, there exists a risk that a Trust service provider will seek recourse against the Trust if it is not timely paid by the Adviser for the fees and expenses for which it is responsible, which could materially adversely affect the Fund.

A discussion of the Board's review of the Fund's investment advisory contract will be available in the Fund's annual and semi-annual shareholder reports for the periods ended April 30 and October 31, respectively.

Financial Information

FINANCIAL HIGHLIGHTS

The Financial Highlights will help you understand the Fund's financial performance for its past five fiscal years, or since inception, if the life of the Fund is shorter. Some of the information is presented on a per Share basis. Total returns represent the rate an investor would have earned (or lost) on an investment in the Fund, assuming reinvestment of any dividends and capital gains.

This information has been audited by Ernst & Young LLP, an independent registered public accounting firm, whose report, along with the Fund's audited financial statements, is included in the Annual Report.

Financial Highlights

(For a Share Outstanding Throughout Each Period)

	Year Ended 4/30/2023	Period Ended 4/30/2022 ¹
Net Asset Value, Beginning of Period	\$23.65	\$25.04
Income From Investment Operations:		
Net investment income (loss) ²	0.45	0.14
Net realized and unrealized gain (loss)	(0.10)	(1.39)
TOTAL FROM INVESTMENT OPERATIONS	0.35	(1.25)
Less Distributions:		
Distributions from net investment income	(0.45)	(0.14)
Net Asset Value, End of Period	\$23.55	\$23.65
Total Return³	1.51%	(5.01)%
Ratios to Average Net Assets:		
Net expenses ⁴	0.29%	0.29% ⁵
Net investment income	1.93%	1.51% ⁵
Expense waiver/reimbursement ⁶	0.10%	0.12% ⁵
Supplemental Data:		
Net assets, end of period (000 omitted)	\$26,611	\$24,594
Portfolio turnover ⁷	28%	3%

1 Reflects operations for the period from December 16, 2021 (commencement of operations) to April 30, 2022.

2 Per share numbers have been calculated using the average shares method.

3 Based on net asset value. Total returns for periods of less than one year are not annualized.

4 Amount does not reflect net expenses incurred by investment companies in which the Fund may invest.

5 Computed on an annualized basis.

6 This expense decrease is reflected in both the net expense and the net investment income ratios shown above. Amount does not reflect expense waiver/reimbursement recorded by investment companies in which the Fund may invest.

7 Securities that mature are considered sales for purposes of this calculation.

Further information about the Fund's performance is contained in the Fund's Semi-Annual Report, dated April 30, 2023, which can be obtained free of charge.

Appendix A: Hypothetical Investment and Expense Information

The following chart provides additional hypothetical information about the effect of the Fund's expenses, including investment advisory fees and other Fund costs, on the Fund's assumed returns over a 10-year period. The chart shows the estimated expenses that would be incurred in respect of a hypothetical investment of \$10,000, assuming a 5% return each year, and an investor's continued holding of Shares. The chart assumes that Shares are purchased at the Fund's net asset value. However, individual Shares cannot be purchased or redeemed at net asset value, and rather are typically bought and sold on an exchange at a market price, which may be higher or lower than net asset value. The chart also assumes that the Fund's annual expense ratio stays the same throughout the 10-year period and that all dividends and distributions are reinvested. The annual expense ratio used in the chart is the gross expense ratio as stated in the "Fees and Expenses" table of this Prospectus (and thus do not reflect any fee waiver or expense reimbursement currently in effect). The hypothetical investment information does not reflect the effect of charges such as brokerage commissions or other fees to financial intermediaries that you may pay (if any). Fund returns, as well as fees and expenses, may fluctuate over time, and your actual investment returns and total expenses may be higher or lower than those shown below.

FEDERATED HERMES SHORT DURATION CORPORATE ETF

ANNUAL EXPENSE RATIO: 0.40%
