Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit FederatedHermes.com/us. See the prospectus for other fees and expenses that apply to a continued investment in the funds.

* The fund's expense ratio is from the most recent prospectus. The expense ratio may reflect voluntary fee waivers and/or expense reimbursements determined by the fund's Advisor and its affiliates. The voluntary waivers and/or reimbursements, if applicable, are in effect up to but not including the later of 9/1/25 or the date of the fund's next effective prospectus.

Federated Hermes U.S. SMID Fund

Growth over time

If you had invested \$10,000 in Institutional Shares on 7/31/20 (month end of the fund's performance inception) and reinvested all distributions, here's how your account would have grown by 12/31/24.

Federated Global Investment Management Company is the advisor of the fund and Hermes Investment Management Limited is the sub advisor.

A word about risk

Mutual funds are subject to risks and fluctuate in value.

Mid-capitalization companies often have narrower markets and limited managerial and financial resources compared to larger and more established companies.

Diversification does not assure a profit nor protect against loss.

The value of equity securities in the fund's portfolio will fluctuate and, as a result, the fund's share price may decline. Equity securities may decline in value because of an increase in interest rates or changes in the stock market.

Because the fund may allocate relatively more assets to certain industry sectors than others, the fund's performance may be more susceptible to any developments which affect those sectors emphasized by the fund.

International investing involves special risks including currency risk, increased volatility, political risks, and differences in auditing and other financial standards.

Small-cap companies may have less liquid stock, a more volatile share price, unproven track records, a limited product or service base and limited access to capital. The above factors could make small-cap companies more likely to fail than larger companies and increase the volatility of the fund's portfolio, performance and price. Suitable securities of small-cap companies also can have limited availability and cause capacity constraints on investment strategies for funds that invest in them.

Growth stocks tend to have higher valuations and thus are typically more volatile than value stocks. Growth stocks also may not pay dividends or may pay lower dividends than value stocks.

Value stocks tend to have higher dividends and thus have a higher income-related component in their total return than growth stocks. Value stocks also may lag growth stocks in performance, particularly in late stages of a market advance.

Definitions

The holdings percentages are based on net assets at the close of business on 12/31/24 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes. Because this is a managed portfolio, the investment mix will change.

Total return represents the change in value of an investment after reinvesting all income and capital gains. Total return would have been lower in the absence of temporary expense waivers or reimbursements.

Growth over time performance is for the fund's Institutional Shares. The fund offers an additional share class whose performance will vary due to differences in charges and expenses.

Beta analyzes the market risk of a fund by showing how responsive the fund is to the market. The beta of the market is 1.00. Accordingly, a fund with a 1.10 beta is expected to perform 10% better than the market in up markets and 10% worse in down markets. Usually the higher betas represent riskier investments.

Weighted median EPS growth rate is the estimated average annual growth rate of fiscal year earnings per share.

Weighted median P/E (LTM - latest twelve months) is a ratio comparing share price to earnings per share using data from the previous twelve months.

Weighted median P/E (NTM - next twelve months) in calculating this, individual holdings with values greater than 60 are capped at 60 in accordance with Morningstar's methodology for calculating "weighted median P/E."

Weighted median market capitalization is the calculation represented by the median market capitalization of the stocks in the portfolio, weighted by the amount of each stock.

Weighted median price/book is a ratio comparing share price to book value or assets minus liabilities.

Active share is a measure of the percentage of stock holdings in a portfolio that differ from the benchmark index.

Investors should carefully consider the fund's investment objectives, risks, charges and expenses before investing. To obtain a summary prospectus or prospectus containing this and other information, contact us or visit FederatedHermes.com/us. Please carefully read the summary prospectus or the prospectus before investing.

Past performance is no guarantee of future results.

Russell 2500[®] Index measures the performance of the small to mid-cap segment of the US equity universe, commonly referred to as "smid" cap. The Russell 2500[®] Index is a subset of the Russell 3000[®] Index. It includes approximately 2500 of the smallest securities based on a combination of their market cap and current index membership. The Russell 2500[®] Index is constructed to provide a comprehensive and unbiased barometer for the small to mid-cap segment. The Index is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true small to mid-cap opportunity set.

Indexes are unmanaged and cannot be invested in directly.

Ratings and rating agencies

Morningstar Category identifies funds based on their actual investment styles as measured by their underlying portfolio holdings over the past three years. If the fund is less than three years old, the category is based on the life of the fund. ©2025 Morningstar, Inc. All Rights Reserved.
