¹ CME Group Inc.'s policy is to pay a base dividend of 50% to 60% of the prior year's cash earnings plus an annual "variable dividend." The amount of the variable dividend is determined at the end of each year, and is based on operating results, capex, potential M&A activity, and other uses of capital.

[^] Dividend yield is only one component of available portfolio characteristics and it is not and should not be viewed as a statement of current or future performance of the fund.

Dividend changes prior to sale in the TTM*: On 5/23/25, LyondellBasell Industries N.V. increased its dividend by 2.2%. On 6/12/25, Target Corp. increased its dividend by 1.8%. On 7/1/25, Bank of New York Mellon Corp. increased its dividend by 12.8%. On 7/1/25, JPMorgan Chase & Co. increased its dividend by 7.1%. On 7/30/25, Clorox Co. increased its dividend by 1.6%. On 7/30/25, Kenvue Inc. increased its dividend by 1.2%. On 12/9/25, Realty Income Corporation increased its dividend by 2.8%. On 2/17/26, Genuine Parts Co. increased its dividend by 3.2%.

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, contact us or visit FederatedHermes.com/us.

Returns for periods of less than one year are cumulative.

* The fund's expense ratio is from the most recent prospectus. The expense ratio may reflect voluntary fee waivers and/or expense reimbursements determined by the fund's Advisor and its affiliates. The voluntary waivers and/or reimbursements, if applicable, are in effect up to but not including the later of 1/1/27 or the date of the fund's next effective prospectus.

The market price return is calculated from closing prices as determined by the fund's listing exchange. The returns shown do not represent the returns you would receive if you traded shares at other times.

30-day yield (also known as "SEC yield") is a compounded and annualized figure calculated according to a formula set by the SEC. The formula requires use of a specific methodology for calculating dividends and interest earned, and expenses accrued, during the period. The standardized computation is designed to facilitate yield comparisons among different funds. In the absence of temporary expense waivers or reimbursements, the 30-day yield would have been 3.24% at net asset value.

Although the information provided in this document has been obtained from sources which Federated Hermes believes to be reliable, it does not guarantee accuracy of such information and such information may be incomplete or condensed.

Weighted average dividend yield is the prospective dividend yield for each security averaged based on the percentages of the securities in the portfolio. Prospective dividend yield is calculated by taking the most recent declared dividend payment multiplied by the number of dividend payments typically made during the year for each holding divided by the current share price for each security. This is calculated based on a snapshot in time and may change due to fluctuations in share prices, dividends actually paid and changes in holdings in the portfolio.

Beta measures a portfolio's volatility relative to the market. A beta greater than 1.00 suggests the portfolio has historically been more volatile than the market as measured by the fund's benchmark. A beta less than 1.00 suggests the portfolio has historically had less volatility relative to the market.

The ratings provided are sourced from securities ratings agencies S&P Global Ratings (S&P), Scope, and Moody's. S&P and Scope, and (Moody's), respectively, make the following credit rating classifications: A (A) or better are considered to be high credit quality; credit ratings of BBB (Baa) are good credit quality and the lowest category of investment grade; credit ratings BB (Ba) and below are lower-rated securities ("junk bonds"); and credit ratings of CCC (Caa) or below have high default risk. A modifier of 1 or + indicates that the obligation ranks in the higher end of its rating category and a modifier of 3 or - indicates a ranking in the lower end of the category. NR indicates that a rating has not been assigned or is no longer assigned.

The Bloomberg Issuer Default Risk model generates the probability of default over the next year. The model categorizes stocks based on three categories: Investment Grade, High Yield, and Distressed. The highest rating (lowest probability of default) for an Investment Grade stock is IG1, the lowest rating is IG10.

Fund shares are bought and sold on an exchange at market price (not NAV) and are not individually redeemed from the fund. However, shares may be redeemed at NAV directly by certain authorized broker-dealers (Authorized Participants) in very large creation/redemption units. The returns shown do not represent the returns you would receive if you traded shares at other times. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. Market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates the current NAV per share. NAVs are calculated using prices as of the end of regular trading on the New York Stock Exchange (normally 4:00 PM Eastern Time). Recent information, including information about the fund's NAV, market price, premiums and discounts, and bid-ask spreads, is included on the fund's website at FederatedHermes.com/us.

Diversification does not assure a profit nor protect against loss.

ETFs are subject to risks and fluctuate in value.

The value of equity securities in the fund's portfolio will fluctuate and, as a result, the fund's share price may decline. Equity securities may decline in value because of an increase in interest rates or changes in the stock market.

Mid-cap companies often have narrower markets and limited managerial and financial resources compared to larger and more established companies.

Large-cap companies may have fewer opportunities to expand the market for their products or services, may focus their competitive efforts on maintaining or expanding their market share, and may be less capable of responding quickly to competitive challenges. The above factors could result in the share price of large-cap companies lagging the overall stock market or growth in the general economy, and, as a result, could have a negative effect on the fund's portfolio, performance and share price.

There are no guarantees that dividend-paying stocks will continue to pay dividends. In addition, dividend-paying stocks may not experience the same capital appreciation potential as non-dividend-paying stocks.
