

July 2024

Objectives update - Federated Hermes U.S. Strategic Dividend ETF (FDV)

- **Dividend yield:*** The portfolio's holdings had a weighted average dividend yield at 7/31/24 of more than 2.5x that of the S&P 500®.
- **Dividend growth:** Year-to-date (YTD), the portfolio has had 28 of its companies raise dividends. None cut.
- **Long-term total return:** Our income-first approach seeks to generate competitive long-term total return driven by dividends and dividend growth. Over the last 12 months, our style of investing in stocks with the potential for high and rising dividends has underperformed the broad market, with high-yielding S&P 500® stocks underperforming no/low-yielding stocks by 10.00%. However, this trend reversed in July, with high-yielding stocks outperforming no/low-dividend payers by 6.18%.

*For standard yield of the fund and for total returns, see the chart on page three.

Insights from the team

- **How might rate cuts impact the portfolio?** 1) Lower yields on cash and fixed income should make high dividend yields relatively more attractive to income-seeking investors. 2) The defensive dividend-paying sectors in which we invest have outperformed in the six months after the first cut; in the last four cycles, Utilities, Consumer Staples, Health Care and Industrials performed best on average, according to Strategas. And 3), in an environment where interest rates are falling in a weakening economy, the high-quality dividend payers we seek offer an attractive value proposition: both downside defense and rate sensitivity, as they have a history of outperforming in down markets and tend to benefit from lower costs of capital.

History suggests to fear the cut, but not necessarily for dividend-paying companies

Typically, a market bottom occurs within a year after a rate cut. In the last eight cut cycles, the market fell on average -22.2%.

Investment view

- In July, weakening macro data (i.e. jobs, manufacturing) brought volatility back into the market, highlighting the benefit of defensive, high-yield, low-volatility investments. The fund outperformed during this period and narrowed its YTD performance differential vs. the S&P 500® (see graph). Meanwhile, the fund is still "on sale," with its high- and rising-income potential still trading at an attractive valuation relative to the broad market (see pg. 2). We believe now is a buying opportunity.

The performance differential between the S&P 500® and FDV (NAV) narrowed to -1.24% YTD as of 8/6/24

As of 8/6/24. Sources: Bloomberg, Federated Hermes analysis. **Performance quoted represents past performance, which is no guarantee of future results. Fund performance changes over time and current performance may be lower or higher than what is stated. Investment return and principal value will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. Performance includes reinvestment of dividends and other earnings. To view performance current to the most recent month-end contact us or visit FederatedHermes.com/us. See page three for standard fund total returns.**

Federated Hermes U.S. Strategic Dividend ETF (FDV)

Our philosophy

We believe in owning businesses that are committed to providing investors regular dividend payments.

We are not a traditional equity value shop; rather, we believe in an income-first approach that seeks to deliver a high current yield and growing income stream to our clients. We believe we can meet the needs of investors seeking current income, as well as those looking for moderate capital appreciation through dividend growth.

Objective

The fund pursues income and long-term capital appreciation by investing primarily in high-dividend-paying stocks of US companies with dividend growth potential.

- Seeks a higher dividend yield than that of the broad equity market
- Invests in high-quality companies positioned to increase their dividends over time
- Offers the potential for competitive upside performance in strong market environments and the potential for lower downside risk in weak environments

Key data

- Gross weighted average dividend yield of 3.83% is more than 2.5x the S&P 500® at 1.34%¹
- 30-day yield is 3.38% at net asset value (NAV) and market price²
- Trailing 12 months, there were 45 dividend increases and zero cuts
- 100% of the 56 holdings were investment-grade rated (highest S&P-rated holdings: Johnson & Johnson at AAA; lowest: Conagra Brands, Inc. and Skyworks Solutions, Inc. at BBB-)

Performance quoted represents past performance, which is no guarantee of future results. Fund performance changes over time and current performance may be lower or higher than what is stated. Investment return and principal value will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. Performance includes reinvestment of dividends and other earnings. To view performance current to the most recent month-end contact us or visit FederatedHermes.com/us. Investment-grade securities are securities that are rated at least "BBB" or unrated securities of a comparable quality. Non-investment-grade securities are securities that are not rated at least "BBB" or unrated securities of a comparable quality.

¹ Yield for the fund and index is the weighted average dividend yield. See the disclosures at the end of this document for yield definitions.

² In the absence of temporary expense waivers or reimbursements, the 30-day yield would have been 3.28% at NAV and market price as of 7/31/24.

³ 5-year weighted average beta of underlying stocks vs. the S&P 500® Index.

Past performance is no guarantee of future results.

Performance quoted represents past performance, which is no guarantee of future results. Fund performance changes over time and current performance may be lower or higher than what is stated. Investment return and principal value will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. Performance includes reinvestment of dividends and other earnings. To view performance current to the most recent month-end contact us or visit FederatedHermes.com/us.

The market price return is calculated from closing prices as determined by the fund's listing exchange. The returns shown do not represent the returns you would receive if you traded shares at other times.

*** The fund's expense ratio is from the most recent prospectus. The expense ratio may reflect voluntary fee waivers and/or expense reimbursements determined by the fund's Advisor and its affiliates. The voluntary waivers and/or reimbursements, if applicable, are in effect up to but not including the later of 1/1/25 or the date of the fund's next effective prospectus.**

† Includes acquired fund fees and other expenses.

[^] In the absence of temporary expense waivers or reimbursements, the 30-day yield would have been 3.44% at NAV and market price as of 6/30/24.

Fund shares are bought and sold on an exchange at market price (not NAV) and are not individually redeemed from the fund. However, shares may be redeemed at NAV directly by certain authorized broker-dealers (Authorized Participants) in very large creation/redemption units. The returns shown do not represent the returns you would receive if you traded shares at other times. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. Market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates the current NAV per share. NAVs are calculated using prices as of 4:00 PM Eastern Time. Recent information, including information about the fund's NAV, market price, premiums and discounts, and bid-ask spreads, is included on the fund's website at FederatedHermes.com/us.

Definitions

30-day yield (also known as "SEC yield") is a compounded and annualized figure calculated according to a formula set by the SEC. The formula requires use of a specific methodology for calculating dividends and interest earned, and expenses accrued, during the period, and reflects the net asset value (NAV) per fund share. The standardized computation is designed to facilitate yield comparisons among different funds. The 30-day yield at market price is calculated similarly to the "SEC yield" but is based on market price rather than NAV.

Beta analyzes the market risk of a fund by showing how responsive the fund is to the market. The beta of the market is 1.00. Accordingly, a fund with a 1.10 beta is expected to perform 10% better than the market in up markets and 10% worse in down markets. Usually the higher betas represent riskier investments.

High-dividend-paying stocks are defined by the Advisor as those with a higher dividend yield than the S&P 500® Index's average dividend yield.

The holdings percentages are based on net assets at the close of business on 7/31/24 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes. Because this is a managed portfolio, the investment holdings will change.

Payout ratio is the proportion of earnings paid out as dividends to shareholders, typically expressed as a percentage.

Price/book ratio is a ratio used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share.

Price/cash flow ratio is a stock valuation measure calculated by dividing a firm's cash flow per share into the current stock price.

Price/earnings ratio (P/E ratio) is a valuation ratio of a company's current share price compared to its per-share earnings. The P/E ratio helps investors determine the market value of a stock as compared to the company's earnings. A low P/E ratio might indicate that a stock that has the potential for significant growth is undervalued. P/E ratios are only one indicator of a company's financial well-being. Forward price-to-earnings (Forward P/E) is a version of the P/E that uses forecasted earnings for the P/E calculation. The earnings used in this formula are just an estimate and not as reliable as current or historical earnings data.

Weighted average dividend yield is the prospective dividend yield for each security averaged based on the percentages of the securities in the portfolio. Prospective dividend yield is calculated by taking the most recent declared dividend payment multiplied by the number of dividend payments typically made during the year for each holding divided by the current share price for each security. This is calculated based on a snapshot in time and may change due to fluctuations in share prices, dividends actually paid and changes in holdings in the portfolio.

S&P 500® Index is an unmanaged capitalization-weighted index of 500 stocks designated to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries. Indexes are unmanaged and cannot be invested in directly.

Indexes are unmanaged and cannot be invested in directly.

A word about risk

There are no guarantees that dividend-paying stocks will continue to pay dividends. In addition, dividend-paying stocks may not experience the same capital appreciation potential as non-dividend-paying stocks.

Diversification does not assure a profit nor protect against loss.
