Thomas Scherr, CFA

### Yields (%)

30-day yield (R6) 7.00

30-day yield (IS) 6.99

30-day yield (A) 6.43

## Fund description

The fund pursues a high level of current income by investing primarily in non-investment-grade corporate fixed-income securities issued by U.S. or foreign businesses. Such securities tend to perform at their best during economic recoveries and expansions, and can offer portfolio diversification as their performance historically is uncorrelated to other types of bonds.

## Average annual total returns (%)

Performance shown is before tax.

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit [FederatedHermes.com/us](http://FederatedHermes.com/us). Maximum offering price figures reflect the maximum sales charge of 4.5% for A Shares. See the prospectus for other fees and expenses that apply to a continued investment in the fund. Total returns for periods of less than one year are cumulative.

\* The fund's expense ratio is from the most recent prospectus. The expense ratio may reflect voluntary fee waivers and/or expense reimbursements determined by the fund's Advisor and its affiliates. The voluntary waivers and/or reimbursements, if applicable, are in effect up to but not including the later of 1/1/25 or the date of the fund's next effective prospectus.

## Investment approach

### Consistency of people

- The high-yield team is comprised of 17 investment professionals with an average of 19 years of investment experience, 12 of 17 team members have more than 10 years of experience, the vast majority of experience earned on the Federated Hermes high-yield team.
- Analysts are industry specialists responsible for researching the complex capital structures of high-yield companies and providing security recommendations to the portfolio managers.

### Consistency of process

- A bottom-up process, focusing on strong operating companies that generate free cash flow in stable and predictable businesses.
- We hold a fundamentally different view of quality compared to the rating agencies. Our process includes: focus on franchise value, industry profile, competitive profile, strength of management, forward-looking view of company financials and a belief that the market is more efficient at pricing high-yield credit risk than the agencies.

## Top 10 sector weightings (%)

## Quality breakdown<sup>1</sup> (%)

Quality breakdown does not apply to Equity or Cash/Cash Equivalents.

Portfolio composition is based on net assets at the close of business on 6/30/24 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes. Because this is a managed portfolio, the investment mix will change.

## Market overview

For the three months ended June 30, 2024, the high yield market outperformed the investment grade bond market. The Bloomberg US Corporate High Yield 2% Issuer Capped Bond Index (BC2%HYBI) returned 1.09% versus a 0.07% return for the Bloomberg Aggregate Bond Index (Aggregate), a measure of high-quality bond performance.

For the 8th consecutive quarter, the high yield market delivered strong relative performance versus the Aggregate index. The key factor driving the outperformance continues to be a resilient U.S. economy supported by a robust employment environment. While the unemployment rate and weekly jobless claims have recently moved modestly higher, the overall jobs picture remains strong by historical standards. This has allowed the economy to shrug off various indicators signaling potential weakness including higher short term interest rates engineered by the Federal Reserve and declining leading indicators. Similarly, corporate credit quality is showing some modest signs of weakening but remains reasonable historically. Credit spreads did move slightly wider late in the period but remain relatively tight by historical standards. For example, the credit spread between the Credit Suisse High Yield Bond Index and Treasury securities with similar maturities increased from 322 basis points at the beginning of the quarter, ending the quarter at 338 basis points.

Within the high yield market, the strongest performing major industry sectors relative to the BC2%HYBI were: Pharmaceuticals, Other Financials, Other Industrials, Leisure and Aerospace & Defense. The worst performing major industry sectors relative to the BC2%HYBI were: Wireline Telecommunications, Cable & Satellite, Media & Entertainment, Construction Machinery and Building Materials. Reflecting some concerns about credit quality, from a credit quality perspective, the higher quality BB-rated sector led the way returning 1.32% followed by the B-rated sector which returned 1.03%. Perhaps reflecting some developing concerns about credit quality, the lower quality CCC-rated underperformed the overall market with a return of -0.01%.

## Performance

The fund underperformed the BC2%HYBI. The main reason for the fund's underperformance was security selection in the Media & Entertainment sector specifically in its holdings in radio and TV broadcasting companies. Specific high yield issuers held by the portfolio that negatively impacted performance relative to the BC2%HYBI included: iHeartCommunications, CSC Holdings, GoTo Group, Scripps Escrow and Terrier Media Buyer, Inc. The fund's total return for the period also reflects actual cash flows, transaction costs and other expenses which were not reflected in the total return of the BC2%HYBI.

The fund was positively impacted by its underweight to the underperforming Wireline Telecommunications sector. The fund was also positively impacted by security selection in the Property & Casualty Insurance, Consumer Cyclical Services, Healthcare and Diversified Manufacturing sectors. Specific high yield issuers held by the portfolio that positively impacted performance relative to the BC2%HYBI included: NFP Corp, Consensus Cloud Solutions, Grifols Escrow, Madison IAQ and Garda World Security.

## How we are positioned

Credit spreads remain very tight, supported by a resilient U.S. economy and strong employment. While not yet at the Fed's 2% target, inflation has come down and the Fed appears ready (if not anxious) to lower short term rates, especially if they perceive weakness in the economic picture. The earning's performance of high yield companies remains stable, although in many cases this is the result of higher prices in a weak volume environment. High interest costs are negatively impacting weaker issuers across the leveraged finance sector causing default rates to move higher in sectors like leveraged loans. High yield bond defaults have remained well behaved so far in 2024, but secularly challenged issuers in sectors such as Media & Entertainment, Retail, Wireline Telecommunications and Cable and Satellite could lead to higher defaults later in 2024 and into 2025. Credit spreads did move slightly wider late in the period off historically tight levels, but whether this represents a modest tone change in the market or fears of broader credit deterioration seeping in is yet to be seen.

## Federated Hermes Institutional High Yield Bond Fund

The fund's A Shares commenced operations on February 14, 2023. For the periods prior to commencement of operations of the fund's A Shares, the performance information shown is for the fund's Institutional Shares. The performance of the Institutional Shares has not been adjusted to reflect the expenses applicable to the A Shares. The performance has been adjusted to reflect the differences in sale charges and deferred sales charges applicable to the A Shares. The expense ratios of the A Shares will be higher than the expense ratio of the Institutional Shares; accordingly, for the periods prior to the commencement of operations, the performance of the A Shares would have been lower than the performance of the Institutional Shares.

<sup>1</sup>The ratings agencies that provided the ratings are S&P Global Ratings, Moody's and Fitch. When ratings vary, the lowest rating is used. Credit ratings of A or better are considered to be high credit quality; credit ratings of BBB are good credit quality and the lowest category of investment grade; credit ratings BB and below are lower-rated securities ("junk bonds"); and credit ratings of CCC or below have high default risk. The credit quality breakdown does not give effect to the impact of any credit derivative investments made by the fund.

30-day yield (also known as "SEC yield") for A Shares is a compounded and annualized figure calculated according to a formula set by the SEC. The formula requires use of a specific methodology for calculating dividends and interest earned, and expenses accrued, during the period, and reflects the maximum offering price per fund share. The standardized computation is designed to facilitate yield comparisons among different funds. In the absence of temporary expense waivers or reimbursements, the 30-day yield would have been 6.38% at maximum offering price for A Shares, 6.98% for R6 Shares, and 6.95% for Institutional Shares.

The fund's R6 Shares commenced operations on June 30, 2016. For the period prior to the commencement of operations of the R6 Shares, the performance information shown is for Institutional Shares. The performance of the Institutional Shares has not been adjusted to reflect the expenses applicable to the R6 Shares since the R6 Shares have a lower expense ratio than the expense ratio of the Institutional Shares. The performance of the Institutional Shares has been adjusted to remove any voluntary waiver of fund expenses related to the Institutional Shares that may have occurred during the period prior to the commencement of operations of the R6 Shares.

### A word about risk

Mutual funds are subject to risks and fluctuate in value.

High-yield, lower-rated securities generally entail greater market, credit/default and liquidity risks, and may be more volatile than investment-grade securities.

Bond prices are sensitive to changes in interest rates, and a rise in interest rates can cause a decline in their prices.

### Definitions

**Alpha** shows how much or how little return is generated, given the risk a portfolio takes. A portfolio with an alpha greater than 0 has earned more than expected given its beta—meaning the portfolio has generated excess return without increasing risk. A portfolio with a negative alpha is producing a lower return than would be expected given its risk.

**Beta** measures a portfolio's volatility relative to the market. A beta greater than 1.00 suggests the portfolio has historically been more volatile than the market as measured by the fund's benchmark. A beta less than 1.00 suggests the portfolio has historically had less volatility relative to the market.

**Sharpe ratio** is calculated by dividing a fund's annualized excess return by the fund's annualized standard deviation. The higher the Sharpe ratio, the better the fund's historical risk adjusted performance.

**Standard deviation** is a historical measure of the variability of returns relative to the average annual return. A higher number indicates higher overall volatility.

**Up capture ratio/down capture ratio** is a measure of how well a manager was able to replicate or improve on periods of positive benchmark returns and how badly the manager was affected by periods of negative benchmark returns. The up-market capture ratio is a measure of a manager's performance in up markets relative to the index during the same period. For example, a ratio value of 115 indicates that the manager has outperformed the market index by 15% in periods when the index has risen. The down-market capture ratio is the direct opposite of the up-market capture ratio, gauging performance of the manager relative to the index in down markets. A ratio value of 80 would indicate the manager had declined on 80% as much as the declining overall market, indicating relative outperformance.

**Weighted average bond price** is the weighted average of all individual bond prices within a portfolio.

**Weighted average coupon** is the weighted average interest payment of all individual debt securities within a portfolio.

**Weighted average duration to worst** is the approximate percentage change in a bond's price given a 1% change in its yield-to-maturity or its yield-to-call, whichever is lower. Duration-to-Worst is the same as Macaulay's duration except the pre-determined set of principal and interest cash flows are based on either the final maturity date, or a call date within the bond's call schedule, whichever would result in the lowest yield to the investor – i.e., the Yield-to-Worst.

**Weighted average effective maturity** is the average time to maturity of debt securities held in the fund.

**Weighted average yield to worst** is an average of the lowest potential yield that can be received on a bond without the issuer actually defaulting. The yield to worst is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions, including prepayment, call or sinking fund, are used by the issuer.

**Bloomberg US Aggregate Bond Index** is an unmanaged index composed of securities from the Bloomberg Government/Corporate Bond Index, the Mortgage-Backed Securities Index and the Asset-Backed Securities Index. Total return comprises price appreciation/depreciation and income as a percentage of the original investment. Indices are rebalanced monthly by market capitalization.

**Bloomberg US Corporate High Yield 2% Issuer Capped Index** is an issuer-constrained version of the flagship US Corporate High Yield Index, which measures the USD-denominated, high yield, fixed-rate corporate bond market. The index follows the same rules as the uncapped version, but limits the exposure of each issuer to 2% of the total market value and redistributes any excess market value index wide on a pro rata basis. The index was created in 2002, with history backfilled to January 1, 1993.

Indexes are unmanaged and cannot be invested in directly.
