Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit FederatedHermes.com/us. Maximum offering price figures reflect the maximum sales charge of 4.5% for A Shares. See the prospectus for other fees and expenses that apply to a continued investment in the fund. Performance for other share classes will vary due to differences in charges and expenses. Total returns for periods of less than one year are cumulative.

* The fund's expense ratio is from the most recent prospectus, which shows that the fund is voluntarily waiving expenses.

Investment approach

Multiple alpha sources	Portfolio positioning	Integrated investment team
<ul style="list-style-type: none"> The municipal bond investment process is integrated with Federated Hermes' fixed-income effort (the Alpha Pod process) as broad market and macroeconomic forces drive returns across taxable and tax-exempt bond markets Seeks diversified sources of alpha across municipal credit sector and credit quality allocation, duration management, yield curve management and security selection 	<ul style="list-style-type: none"> Invests primarily in short-intermediate tax-exempt municipal bonds and typically maintains a dollar-weighted average portfolio duration of less than 5 years Historically has invested less than 5% in below-investment grade securities* Allocates across fixed and floating securities based on direction of interest rates and across municipal sectors that offer the best risk/return profile 	<ul style="list-style-type: none"> Federated Hermes' municipal investment team has experience across a range of investment strategies, from liquidity management to intermediate and longer-duration portfolios Key investment team members manage liquidity, ultrashort and low duration municipal portfolios, applying their insights across the short-end of the yield curve

* Per the prospectus, the fund is permitted to invest up to 49% in below-investment grade securities.

Sector weightings (%)

Quality breakdown¹ (%)

Totals may not add up to 100% due to rounding.

Portfolio composition is based on net assets at the close of business on 6/30/23 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes. Because this is a managed portfolio, the investment mix will change.

Highlights

- The fund's net quarterly returns significantly exceeded both the prospectus benchmark and the longer-duration custom benchmark
- Security selection, yield curve positioning and an overweight in credit benefited performance
- The fund continues to focus on investment-grade fixed-coupon issuance in the 2-to-7-year duration space to lock in higher-yielding opportunities and increase portfolio duration

Looking back

Treasury and municipal market yields increased during the quarter as the U.S. economy continued to expand at a moderate pace, inflation remained elevated and labor markets remained tight. The resilient U.S. economy and persistent inflation combined with fading fears of U.S. banking sector instability to prompt upward revisions in market expectations for Federal Reserve (Fed) monetary policy as well as its projections for the peak fed funds rate. Although the Fed held its target rates steady at its June meeting—suggesting a pause was warranted to evaluate the impacts of the cumulative tightening already in place and lingering bank sector stresses—subsequent official comments and meeting minutes suggested more rate hikes will likely be necessary in the ongoing inflation battle. The AAA-rated Bloomberg Evaluation 2-, 5-, 10- and 30-year municipal yields increased 51, 38, 27 and 19 basis points, respectively. Treasury yields increased by 87, 58, 37 and 21 basis points on 2-, 5-, 10- and 30-year securities, respectively.

The S&P Municipal Bond Index posted a return of 0.01% for the quarter. The 3-year component of the index returned -0.54%, the 10-year component returned -0.53% and the portion of the index maturing in 22 years and longer returned 0.95%. The S&P Intermediate Municipal Bond Index returned -0.52%. The S&P Municipal Bond A-Rating Band Index returned 0.04%, and the S&P Municipal Bond BBB Rating Band Index returned 0.66%.

The total return of the S&P Municipal Bond 1-5 Years Investment Grade 5% Pre-Refunded Index (SPMB15), a custom performance benchmark for the fund, was -0.42%.

Performance

During the second quarter of 2023, the fund had net total returns of 0.20% for the Institutional Shares (IS), 0.14% for the Service Shares (SS) and 0.24% for the A Shares at net asset value (NAV). These returns significantly exceeded both the published benchmark and the custom benchmark.

Performance contributors

- Portfolio duration, which averaged about 90% of the custom benchmark
- Overweight in credit, namely BBB and A-rated securities, benefited performance
- Overweight in variable-rate demand notes (VRDNs) and floating-rate notes (FRNs), which outperformed in a rising-rate environment
- Security structure and selection, as the prices of many lower-coupon discount bonds with durations of 1-4 years outperformed the benchmark and continue to appear attractive from a future price performance perspective

Performance detractors

- Portfolio weightings (less than 7%) beyond five years in duration, which are excluded in the benchmark indexes, underperformed with the rise in yields

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit FederatedHermes.com/us.

How we are positioned

The Treasury and municipal yield curves remain inverted. The Fed will likely tighten monetary policy two more times in 2023 and leave rates higher for longer.

Management believes the portfolio structure will emphasize high-quality fixed-rate issuance in the 2-to-7-year space, in which coupon/yield carry is now higher than a year ago. Portfolio duration will likely continue to extend. The portfolio should continue to benefit in terms of income and liquidity with material weightings in VRDNs and FRNs. With an inverted yield curve, they can contribute to a combination of higher income and rates defensibility as the Fed is likely to delay future rate cuts. This has the potential to lower volatility and provide tactical flexibility to adjust and deploy capital into better-yielding market opportunities.

We remain constructive to emphasizing high-quality General Obligation and Revenue debt of issuers over mid-to-lower-quality debt.

Past performance is no guarantee of future results. Rankings are based on total return and do not take sales charges into account.

As of October 31, 2007, the fund gained the ability to invest at least a majority of its assets in securities rated investment-grade (or unrated securities of comparable quality), and may purchase securities rated below investment-grade (or unrated securities of comparable quality), which are also known as junk bonds, up to 49% of its assets. The fund does not have a specific minimum quality rating.

As of August 31, 2019, benchmark 1 changed from S&P Municipal Bond Short Intermediate Index to S&P Municipal Bond Short Index and benchmark 2 changed from S&P 1-5 Year National AMT-Free Municipal Bond Index to S&P Municipal Bond 1-5 Years Investment Grade 5% Max Pre-Refunded Index.

¹The ratings agencies that provided the ratings are Standard & Poor's, Moody's and Fitch. When ratings vary, the highest rating is used. Credit ratings of A or better are considered to be high credit quality; credit ratings of BBB are good credit quality and the lowest category of investment grade; credit ratings BB and below are lower-rated securities ("junk bonds"); and credit ratings of CCC or below have high default risk. The credit quality breakdown does not give effect to the impact of any credit derivative investments made by the fund.

30-day yield (also known as "SEC yield") for A Shares is a compounded and annualized figure calculated according to a formula set by the SEC. The formula requires use of a specific methodology for calculating dividends and interest earned, and expenses accrued, during the period, and reflects the maximum offering price per fund share. The standardized computation is designed to facilitate yield comparisons among different funds. In the absence of temporary expense waivers or reimbursements, the 30-day yield would have been 2.39% at maximum offering price for A Shares, 2.43% for SS Shares, and 2.60% for Institutional Shares.

Federated Hermes Short-Intermediate Municipal Fund

A word about risk

Mutual funds are subject to risks and fluctuate in value.

International investing involves special risks, including currency risk, increased volatility, political risks and differences in auditing and other financial standards.

Small company stocks may be less liquid and subject to greater price volatility than large capitalization stocks.

Prices of emerging market and frontier market securities can be significantly more volatile than the prices of securities in developed countries, and currency risk and political risks are accentuated in emerging markets.

Diversification does not assure a profit nor protect against loss.

Definitions

Alpha shows how much or how little return is generated, given the risk a portfolio takes. A portfolio with an alpha greater than 0 has earned more than expected given its beta—meaning the portfolio has generated excess return without increasing risk. A portfolio with a negative alpha is producing a lower return than would be expected given its risk.

Beta measures a portfolio's volatility relative to the market. A beta greater than 1.00 suggests the portfolio has historically been more volatile than the market as measured by the fund's benchmark. A beta less than 1.00 suggests the portfolio has historically had less volatility relative to the market.

Sharpe ratio is calculated by dividing a fund's annualized excess return by the fund's annualized standard deviation. The higher the Sharpe ratio, the better the fund's historical risk adjusted performance.

Standard deviation is a historical measure of the variability of returns relative to the average annual return. A higher number indicates higher overall volatility.

Up capture ratio/down capture ratio is a measure of how well a manager was able to replicate or improve on periods of positive benchmark returns and how badly the manager was affected by periods of negative benchmark returns. The up-market capture ratio is a measure of a manager's performance in up markets relative to the index during the same period. For example, a ratio value of 115 indicates that the manager has outperformed the market index by 15% in periods when the index has risen. The down-market capture ratio is the direct opposite of the up-market capture ratio, gauging performance of the manager relative to the index in down markets. A ratio value of 80 would indicate the manager had declined on 80% as much as the declining overall market, indicating relative outperformance.

Weighted average bond price is the weighted average of all individual bond prices within a portfolio.

Weighted average effective duration (sometimes called "Option-Adjusted Duration") is a measure of a security's price sensitivity to changes in interest rates calculated using a model that recognizes that the probability of a bond being called or remaining outstanding until maturity may vary if market interest rates change, and that makes

adjustments based on a bond's embedded options (e.g., call rights, or in the case of a mortgage-backed security, the probability that homeowners will prepay their mortgages), if any, based on the probability that the options will be exercised. A fund's weighted average effective duration will equal the market value weighted average of each bond's effective duration in the fund's portfolio. As with any model, several assumptions are made so the weighted average effective duration of a fund in the Federated Hermes family of funds may not be comparable to other funds outside of the Federated Hermes family of funds. Securities with longer durations are more sensitive to changes in interest rates than securities of shorter durations.

Weighted average effective maturity is the average time to maturity of debt securities held in the fund.

Weighted average yield to worst is an average of the lowest potential yield that can be received on a bond without the issuer actually defaulting. The yield to worst is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions, including prepayment, call or sinking fund, are used by the issuer.

Yield curve is a graph showing the comparative yields of securities in a particular class according to maturity. Securities on the long end of the yield curve have longer maturities.

S&P Municipal Bond 1-5 Years Investment Grade 5% Max

Pre-Refunded Index represents the portion of the S&P Municipal Bond Investment Grade Index composed solely of investment-grade bonds (those with ratings higher than "BBB-"/"Baa3") with remaining maturities of between one and five years, 5% of which are pre-refunded. Indexes are unmanaged and cannot be invested in directly.

S&P Municipal Bond Short Index consists of bonds in the S&P Municipal Bond Index with a minimum maturity of six months and a maximum maturity of four years.

Indexes are unmanaged and cannot be invested in directly.
