Fund description

The fund seeks total return consistent with current income by investing primarily in a diversified portfolio of investment-grade debt, including asset- and mortgage-backed, corporate, Treasury and government-agency securities. Its portfolio is invested in sectors that offer the best risk/return balance, while maintaining a weighted average effective duration of one year or less.

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit FederatedHermes.com/us. See the prospectus for other fees and expenses that apply to a continued investment in the fund. Total returns for periods of less than one year are cumulative.

* The fund's expense ratio is from the most recent prospectus. The expense ratio may reflect voluntary fee waivers and/or expense reimbursements determined by the fund's Advisor and its affiliates. The voluntary waivers and/or reimbursements, if applicable, are in effect up to but not including the later of 12/1/24 or the date of the fund's next effective prospectus.

Investment approach

Multiple alpha sources

- The ultrashort bond investment process is integrated with Federated Hermes' fixed-income effort (the Alpha Pod process) as broad market and macroeconomic forces drive returns
- Seeks diversified sources of alpha across sector allocation, security selection, duration management and yield-curve strategy

Portfolio positioning

- Invests primarily in asset-backed, mortgage-backed, corporate, Treasury and government agency securities and maintains a dollar-weighted average effective portfolio duration of one year or less
- Generally invests less than 10% in below investment-grade securities*
- Allocates across fixed and floating-rate securities based on the manager's view on the potential direction of interest rates

Tenured team with long-term results

- Team-based approach focused by sector to extract value from each step of the process
- Federated Hermes' fixed-income philosophy and process has a 50-year heritage
- Portfolio managers have more than 65 years of combined experience and have worked at Federated Hermes for more than 28 years

* Per the prospectus, the fund is permitted to invest up to 35% in below investment-grade securities.

Quality breakdown¹ (%)

Quality breakdown does not apply to Equity or Cash/Cash Equivalents.

Portfolio composition is based on net assets at the close of business on 9/30/24 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes. Because this is a managed portfolio, the investment mix will change.

Highlights

- Fund performance reflected a substantial drop in short-term market yields, which finished the quarter lower as the rate on the US 2-year Treasury note decreased from 4.76% at 6/28/2024 to 3.64% at 9/30/24
- Short-term credit spreads tightened somewhat during the quarter. The spread (option-adjusted) on the Bloomberg 1-3 Year Corporate Index (B1-3CI) decreased from 60 basis points at 6/28/24 to 56 basis points at 9/30/24. Conversely, the spread on the Bloomberg ABS Index rose from 57 basis points to 64 basis points over the course of the reporting period
- The Federal Reserve (Fed) cut rates during the third quarter of 2024, as the target rate was reduced from 5.25-5.50% to 4.75-5.00%. After aggressively tightening policy through 2022 and the beginning of 2023, the Fed decided to cut rates by 0.50% after holding rates steady since July 2023. While the future path is uncertain, we believe policymakers' next move will most likely be another ease

Looking back

Fund performance was positive in the third quarter aided by the decline in front-end rates and modestly tighter corporate credit spreads. The fund's exposure to spread product benefitted performance as both corporate bonds and asset-backed securities (ABS) provided additional income over comparable duration government securities. The yield on the 2-year Treasury bond decreased from 4.76% at the end of the second quarter to 3.64% by the end of the third quarter of 2024. With the move lower in rates, the fund's capital value rose by \$0.08 to \$9.30. With modest tightening during the period, short corporate bonds (B1-3CI tightened from 0.60% on 6/28/2024 to 0.56% on 9/30/2024) outperformed comparable duration government securities through price appreciation and the additional income generated during the quarter. Conversely, ABS spreads (Bloomberg ABS Index) widened by 7 basis points, ending the quarter at 0.64%. Nonetheless, the carry from these bonds also supported the performance of the portfolio. We also saw a continuation of heavy new issue supply during the period in both investment-grade corporates and ABS, however, investor demand for high-quality assets proved to be robust and the supply was well received.

The average duration of the fund during the quarter was 0.94 years, longer than that of the fund's competitive benchmark, the Bloomberg Short-Term Government/Corporate Index (BSTGCI), which averaged 0.49 years during the period. Management has maintained the fund's duration at levels longer than the previous year under the assumption that the Fed is now in a cutting cycle and the peak federal funds rate is in the review mirror. Similarly, short-term market yields have probably hit their cycle highs. Additionally, duration remains longer than the midpoint of the fund's normal 0.4-1.0 year range.

Performance

Federated Hermes Ultrashort Bond Fund's return on IS Shares at net asset value (NAV) for the third quarter was 2.18%, versus returns on the ICE Bank of America Merrill Lynch 1-Year Treasury Bill Index of 2.01% and the BSTGCI of 1.66%. The average return for the Lipper Ultrashort Bond category was 1.76%.

Performance contributors

- The sector allocation added 22 basis points. The outcome reflected the fund's bias toward out-of-index credit-sensitive securities, particularly ABS, in an environment where the spread on these securities provided positive carry during the period
- Security selection added 13 basis points in excess return, as several corporate holdings outperformed the corporate portion of the benchmark
- The fund's interest-rate positioning, combining both duration and yield curve (i.e., holding certain securities with maturities either shorter or longer than that of the benchmark in a rising yield environment) added 26 basis points of performance relative to the benchmark. The fund's duration was consistently longer than that of the benchmark throughout the quarter, during which front-end rates declined

Performance detractors

- None

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit FederatedHermes.com/us.

How we are positioned

The Federated Hermes Ultrashort Bond Fund's investment philosophy reflects the belief that in all but the most difficult of environments, the income earned by utilizing a modestly credit-oriented portfolio should be able to more than offset capital fluctuation and provide a return which exceeds that of a cash investment. This proved to again be the case during the third quarter as the fund outperformed a non-credit comparable, the Treasury component of the BSTGCI (1.66% return). With the modest spread tightening during the quarter and periods of credit volatility seen in the past year, the general overweight to credit remains in place, though investments having lower-credit quality continue to remain below long-run allocations. Interest-rate sensitivity has been raised to levels higher than the general fund midpoint of 0.4-1.0 years (as well as remaining long of the benchmark index) as the Fed's easing cycle appears to be underway. We still believe high-quality corporate and ABS securities will offer attractive carry (i.e., yield income) which can result in a positive contribution to total return for the portfolio.

Past performance is no guarantee of future results. Rankings are based on total return and do not take sales charges into account.

¹The ratings agencies that provided the ratings are S&P Global Ratings, Moody's and Fitch. When ratings vary, the highest rating is used. Credit ratings of A or better are considered to be high credit quality; credit ratings of BBB are good credit quality and the lowest category of investment grade; credit ratings BB and below are lower-rated securities ("junk bonds"); and credit ratings of CCC or below have high default risk. The credit quality breakdown does not give effect to the impact of any credit derivative investments made by the fund.

30-day yield (also known as "SEC yield") for A Shares is a compounded and annualized figure calculated according to a formula set by the SEC. The formula requires use of a specific methodology for calculating dividends and interest earned, and expenses accrued, during the period, and reflects the maximum offering price per fund share. The standardized computation is designed to facilitate yield comparisons among different funds. In the absence of temporary expense waivers or reimbursements, the 30-day yield would have been 4.88% for A Shares, 5.12% for R6 Shares, 5.09% for Institutional Shares, and 4.98% for Service Shares.

Prior to October 27, 1998, the fund was named Federated Limited Duration Government Fund with an investment concentration in government securities. The fund was reconfigured to maintain an ultrashort duration (one year or less) with a revised investment policy of purchasing both higher and lower quality fixed income securities.

The fund's A Shares commenced operations on October 8, 2002. For the period prior to the commencement of operations of the A Shares, the performance information shown is for the fund's Service Shares, adjusted to reflect the sales charges (for maximum offering price performance) that were applicable to the fund's A Shares until December 1, 2019 and expenses of the A Shares.

The fund's R6 Shares commenced operations on May 29, 2019. For the periods prior to the commencement of operations of the R6 Shares, the performance information shown is for the fund's Institutional Shares. The performance of the Institutional Shares has not been adjusted to reflect the expenses applicable to the R6 Shares since the R6 Shares have a lower expense ratio than the expense ratio of the Institutional Shares.

The fund may invest in Federated Hermes portfolios that are not available to the public and provide for more effective diversification than is available through the purchase of individual securities. Where applicable, the fund holdings reflect exposure to underlying securities held by the portfolios.

Federated Hermes Ultrashort Bond Fund

A word about risk

Mutual funds are subject to risks and fluctuate in value.

Bond prices are sensitive to changes in interest rates, and a rise in interest rates can cause a decline in their prices.

The fund is not a "money market" mutual fund. Some money market mutual funds attempt to maintain a stable net asset value through compliance with relevant Securities and Exchange Commission (SEC) rules. The fund is not governed by those rules, and its shares will fluctuate in value.

The value of some mortgage-backed securities may be particularly sensitive to changes in prevailing interest rates, and although the securities are generally supported by some form of government or private insurance, there is no assurance that private guarantors or insurers will meet their obligations.

High-yield, lower-rated securities generally entail greater market, credit/default and liquidity risks, and may be more volatile than investment-grade securities.

Definitions

Alpha shows how much or how little return is generated, given the risk a portfolio takes. A portfolio with an alpha greater than 0 has earned more than expected given its beta—meaning the portfolio has generated excess return without increasing risk. A portfolio with a negative alpha is producing a lower return than would be expected given its risk.

Sharpe ratio is calculated by dividing a fund's annualized excess return by the fund's annualized standard deviation. The higher the Sharpe ratio, the better the fund's historical risk adjusted performance.

Standard deviation is a historical measure of the variability of returns relative to the average annual return. A higher number indicates higher overall volatility.

Weighted average bond price is the weighted average of all individual bond prices within a portfolio.

Weighted average effective duration (sometimes called "Option-Adjusted Duration") is a measure of a security's price sensitivity to changes in interest rates calculated using a model that recognizes that the probability of a bond being called or remaining outstanding until maturity may vary if market interest rates change, and that makes adjustments based on a bond's embedded options (e.g., call rights, or in the case of a mortgage-backed security, the probability that homeowners

will prepay their mortgages), if any, based on the probability that the options will be exercised. A fund's weighted average effective duration will equal the market value weighted average of each bond's effective duration in the fund's portfolio. As with any model, several assumptions are made so the weighted average effective duration of a fund in the Federated Hermes family of funds may not be comparable to other funds outside of the Federated Hermes family of funds. Securities with longer durations are more sensitive to changes in interest rates than securities of shorter durations.

Weighted average effective maturity is the average time to maturity of debt securities held in the fund.

Weighted average spread duration is the average of the spread durations of the underlying securities.

Yield curve is a graph showing the comparative yields of securities in a particular class according to maturity. Securities on the long end of the yield curve have longer maturities.

Bloomberg US Short-Term Government/Corporate Index represents securities that have fallen out of the US Government/Corporate Index because of the standard minimum one year maturity constraint. Sectors include treasuries, agencies, industrials, utilities and financial institutions.

Indexes are unmanaged and cannot be invested in directly.
