Damien Zhang, CFA

Frederick Konopka, CFA

John Paul Lewicke

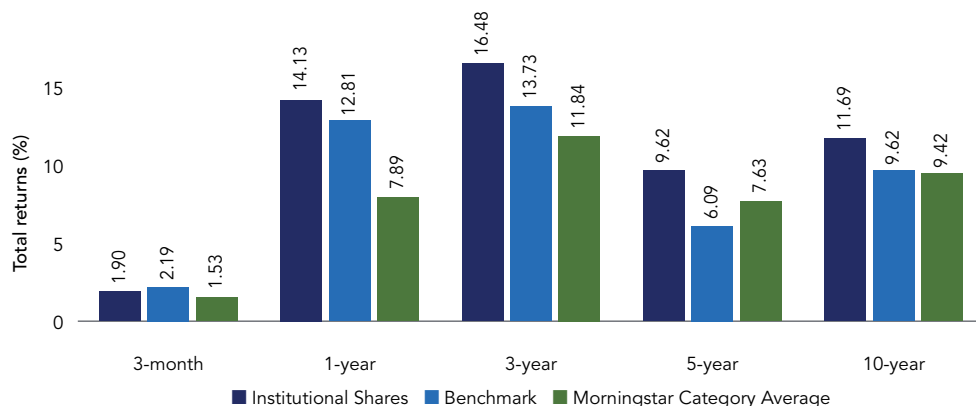

## Fund description

The fund pursues long-term capital appreciation by investing in a diversified portfolio of US small-cap companies from the Russell 2000® Index. Through a bottom-up, systematic approach, it seeks to remove subjective and emotional influences from the stock-selection process.

## Average annual total returns (%)

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit [FederatedHermes.com/us](http://FederatedHermes.com/us). Maximum offering price figures reflect the maximum sales charge of 5.5% for A Shares. See the prospectus for other fees and expenses that apply to a continued investment in the fund. Total returns for periods of less than one year are cumulative.

\* For A and IS Shares, the fund's expense ratio is from the most recent prospectus. The expense ratio may reflect voluntary fee waivers and/or expense reimbursements determined by the fund's Advisor and its affiliates. The voluntary waivers and/or reimbursements, if applicable, are in effect up to but not including the later of 10/1/26 or the date of the fund's next effective prospectus. Regarding R6 Shares, the fund's expense ratio is from the most recent prospectus, which shows that the fund is not waiving any expenses.

## Investment process

### Alpha forecasting

Utilizes a combination of fundamental and technical factors to predict each stock's potential performance relative to the benchmark based on each company's characteristics.

### Portfolio construction

Incorporates multiple benchmark-relative risk controls in an attempt to maximize excess return, net of trading costs.

### Trading review

Proposed trades are reviewed daily to help ensure they reflect accurate, up-to-date information.

### Ongoing research

Continuous research is conducted to look for opportunities that can strengthen the investment process and ensure strategies remain robust.

## Portfolio statistics

Weighted median P/E (LTM)	21.5x
Weighted median P/E (NTM)	14.7x
Weighted median market cap	\$3.0 b
Weighted median price/book	2.4x
Number of securities	301

## Top holdings (%)

American Healthcare REIT Inc - REIT	2.2
Primoris Services Corp.	1.6
Credo Technology Group Holding Ltd.	1.3
Jackson Financial Inc.	1.3
MGP Ingredients, Inc.	1.3
Mirum Pharmaceuticals, Inc.	1.2
BrightSpring Health Services Inc.	1.1
CNO Financial Group, Inc.	1.0
FB Financial Corp.	1.0
Powell Industries, Inc.	1.0
Total % of portfolio	13.0

## Sector weightings (%)

Portfolio composition is based on net assets at the close of business on 12/31/25 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes. Because this is a managed portfolio, the investment mix will change.

## Highlights

- Small cap growth stocks underperformed small cap value stocks
- Weak stock selection among mature companies with strong 1-year returns and positive analyst conviction contributed the most to underperformance
- The fund ended the quarter roughly sector-neutral to benchmark

## Looking back

US equities edged higher during the last stanza of 2025, helping to deliver a third consecutive year of healthy positive returns for investors. The resiliency of US stocks was notable for the period, as the fourth quarter included a prolonged US government shutdown and softening economic data, both of which contributed to periods of elevated market volatility. Nonetheless, most sectors within the broad equity market registered positive gains for the quarter. Health Care, Communication Services and Materials sectors were the top performers; Real Estate, Utilities and Consumer Staples were the only sectors that slid lower for the period. Attractively valued US equity segments outperformed for the quarter, while higher quality stocks were also supported by market participants. Momentum, growth and lower volatility US equity segments lagged. The mega-cap Russell Top 200 Index (+2.99%) outperformed the broad market Russell 3000 Index (+2.40%), the small-cap Russell 2000 Index (+2.19%) and the Russell Midcap Index (+0.16%).

## Performance

Federated Hermes MDT Small Cap Core Fund (Institutional Shares) returned 1.90% in the fourth quarter of 2025, underperforming the 2.19% return of its benchmark, the Russell 2000 Index.

### Performance contributors

- Strong stock selection among and an overweight to companies with attractive valuations and positive analyst conviction
- Favorable stock selection in the Financials, Health Care and Communication Services sectors
- Strong performers overweighted by the fund: Lumen Technologies, Inc., Tactile Systems Technology, Inc. and Cogent Biosciences Inc.

### Performance detractors

- Weak stock selection among mature companies with strong one-year returns and positive analyst conviction
- Unfavorable stock selection in the Information Technology, Industrials and Consumer Discretionary sectors
- Weak performers overweighted by the fund: Life360, Inc., Resideo Technologies, Inc. and JELD-WEN Holding, Inc.

*Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than what is stated. Other share classes may have experienced different returns than the share class presented. To view performance current to the most recent month-end, and for after-tax returns, contact us or visit [FederatedHermes.com/us](https://FederatedHermes.com/us).*

## How we are positioned

The fund ended the fourth quarter roughly sector-neutral to the benchmark, as intended by our multi-layered risk management. Within the sectors, there were overweight positions of the insurance industry and the software & services industry. There were underweight positions of the banks industry and the consumer durables & apparel industry. At the end of the period, the fund was underweight growth stocks.

See disclosure section for important disclosures and definitions.

## Federated Hermes MDT Small Cap Core Fund

**Investors should carefully consider the fund's investment objectives, risks, charges and expenses before investing. To obtain a summary prospectus or a prospectus containing this and other information, contact us or visit [FederatedHermes.com/us](https://www.federatedhermes.com/us). Please carefully read the summary prospectus or the prospectus before investing.**

The fund is the successor to MDT Small Cap Core Fund pursuant to a reorganization that took place on December 8, 2006. Prior to that date, the fund had no investment operations. Accordingly, the performance information shown for periods prior to that date is that of MDT Small Cap Core Fund.

The fund's R6 Shares commenced operations on June 30, 2016. For the period prior to the commencement of operations of the R6 Shares, the performance information shown is for the fund's Institutional Shares. The performance of the Institutional Shares has not been adjusted to reflect the expenses applicable to the R6 Shares since the R6 Shares have a lower expense ratio than the expense ratio of the Institutional Shares. The performance of the Institutional Shares have been adjusted to remove any voluntary waiver of the fund expenses related to the Institutional Shares that may have occurred during the period prior to the commencement of operations of the R6 Shares.

### A word about risk

Mutual funds are subject to risks and fluctuate in value.

Small-cap companies may have less liquid stock, a more volatile share price, unproven track records, a limited product or service base and limited access to capital. The above factors could make small-cap companies more likely to fail than larger companies and increase the volatility of the fund's portfolio, performance and price. Suitable securities of small-cap companies also can have limited availability and cause capacity constraints on investment strategies for funds that invest in them.

Diversification does not assure a profit nor protect against a loss.

The value of equity securities in the fund's portfolio will fluctuate and, as a result, the fund's share price may decline. Equity securities may decline in value because of an increase in interest rates or changes in the stock market.

Because the fund may allocate relatively more assets to certain industry sectors than others, the fund's performance may be more susceptible to any developments which affect those sectors emphasized by the fund.

Growth stocks tend to have higher valuations and thus are typically more volatile than value stocks. Growth stocks also may not pay dividends or may pay lower dividends than value stocks.

Value stocks tend to have higher dividends and thus have a higher income-related component in their total return than growth stocks. Value stocks also may lag growth stocks in performance, particularly in late stages of a market advance.

The quantitative models and analysis used by the fund's adviser may perform differently than expected and negatively affect fund performance.

### Definitions

**Alpha** shows how much or how little return is generated, given the risk a portfolio takes. A portfolio with an alpha greater than 0 has earned more than expected given its beta—meaning the portfolio has generated excess return without increasing risk. A portfolio with a negative alpha is producing a lower return than would be expected given its risk.

**Beta** measures a portfolio's volatility relative to the market. A beta greater than 1.00 suggests the portfolio has historically been more volatile than the market as measured by the fund's benchmark. A beta less than 1.00 suggests the portfolio has historically had less volatility relative to the market.

**Correlation** is the degree to which one variable (here, the fund's returns) fluctuates relative to another (the returns of the fund's benchmark). Correlation ranges from 1.00, when two variables move identically in the same direction, to -1.00, when two variables move identically in the opposite direction.

**R-squared** indicates what percentage of a portfolio's movement in performance is explained by movement in performance of the market. R-squared ranges from 0 to 100, and a score of 100 suggests that all movements of a portfolio's performance are completely explained by movements in the market as measured by the fund's benchmark.

**Sharpe ratio** is calculated by dividing a fund's annualized excess return by the fund's annualized standard deviation. The higher the Sharpe ratio, the better the fund's historical risk adjusted performance.

**Standard deviation** is a historical measure of the variability of returns relative to the average annual return. A higher number indicates higher overall volatility.

**Tracking error** is the difference between a portfolio's returns and the benchmark or index it was meant to mimic or beat.

**Up capture ratio/down capture ratio** is a measure of how well a manager was able to replicate or improve on periods of positive benchmark returns and how badly the manager was affected by periods of negative benchmark returns. The up-market capture ratio is a measure of a manager's performance in up markets relative to the index during the same period. For example, a ratio value of 115 indicates that the manager has outperformed the market index by 15% in periods when the index has risen. The down-market capture ratio is the direct opposite of the up-market capture ratio, gauging performance of the manager relative to the index in down markets. A ratio value of 80 would indicate the manager had declined on 80% as much as the declining overall market, indicating relative outperformance.

**Weighted median P/E (LTM—latest 12 months)** is a ratio comparing share price to earnings per share using data from the previous 12 months.

**Weighted median P/E (NTM—next 12 months)** is a ratio comparing share price to earnings-per-share using estimated data for the next 12 months.

**Weighted median market cap** is the calculation representing the median market capitalization of the stocks in the portfolio, weighted by the amount of each stock.

**Weighted median price/book** is a ratio comparing share price to book value or assets minus liabilities.

**Russell 2000® Index** measures the performance of the small-cap segment of the US equity universe. The Russell 2000® is a subset of the Russell 3000® Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership. The Russell 2000® Index is constructed to provide a comprehensive and unbiased small-cap barometer and is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true small-cap opportunity set.

**S&P 500®** is an unmanaged capitalization-weighted index of 500 stocks designated to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

Indexes are unmanaged and cannot be invested in directly.
