Management's Discussion of Fund Performance

The following discussion compares the performance of the Fund to the ICE BofA 1-Year US Treasury Note Index (the "Index") to show how the Fund's performance compares to the returns of similar investments for the reporting period. See the Average Annual Total Returns table below for the returns of the Fund and related indexes, including the Bloomberg US Aggregate Bond Index, which represents the overall U.S. fixed-income market. The Fund seeks to provide current income consistent with minimal volatility of principal by investing primarily in adjustable- and floating-rate securities.

Top Contributor to Performance

- Sector allocation was the largest positive contributor to relative performance as adjustable securities, specifically floating rate securities with monthly resets, performed well due to high income and tighter spreads.

Top Detractor from Performance

- Yield curve exposure of the Fund did not benefit to the same degree as the Index from a steepening of the yield curve, acting as a drag on relative performance.

Fund Performance

Keep in mind that the Fund's past performance is not a good predictor of how the Fund will perform in the future. The graph and table do not reflect the deduction of taxes that a shareholder would pay on fund distributions or redemption of fund shares.

Cumulative Performance: 8/31/2014 to 8/31/2024
